

J. S. UNIVERSITY, SHIKOHABAD (UP)

EVALUATION SCHEME & SYLLABUS

First Year

FOR

**MASTER OF COMPUTER APPLICATION
(MCA)**

(Two Year Course)

**As per AICTE MODEL CURRICULUM
(Effective from the Session: 2020-21)**

AICTE Model Curriculum based Evaluation Scheme & Syllabus 2021-22

MASTER OF COMPUTER APPLICATION (MCA)
MCA (MASTER OF COMPUTER APPLICATION)

MCA FIRST YEAR, 2020-21

SEMESTER-I

S.No.	Subject Code	Subject Name	Periods per week			Evaluation scheme			
			L	T	P	Sessional	End exam	Total	Credit
1.	MCA-11	Fundamental of Computers & Emerging Technologies	3	0	0	50	100	150	3
2.	MCA-12	Problem Solving using C	3	1	0	50	100	150	4
3.	MCA-13	Principles of Management & Communication	3	0	0	50	100	150	3
4.	MCA-14	Discrete Mathematics	3	0	0	50	100	150	3
5.	MCA-15	Computer Organization & Architecture	3	1	0	50	100	150	4
6.	MCA-12P	Problem Solving using C Lab	0	0	4	50	50	100	2
7.	MCA-15P	Computer Organization & Architecture Lab	0	0	3	50	50	100	2
8.	MCA-16P	Professional Communication Lab	0	0	2	50	50	100	2
		Total						1050	23

L/T/P: Lecture/ Tutorial/ Practical

SEMESTER-II

S.No.	Subject Code	Subject Name	Periods per week			Evaluation scheme			
			L	T	P	Sessional	End exam	Total	Credit
1.	MCA-21	Theory of Automata & Formal Languages	3	0	0	50	100	150	3
2.	MCA-22	Object Oriented Programming	3	1	0	50	100	150	4
3.	MCA-23	Operating Systems	3	0	0	50	100	150	3
4.	MCA-24	Database Management Systems	3	0	0	50	100	150	3
5.	MCA-25	Data Structures & Analysis of Algorithms	3	1	0	50	100	150	4
6.	MAC-21	Cyber Security*	2	0	0	50	100	150*	0
7.	MCA-22P	Object Oriented Programming Lab	0	0	3	50	50	100	2
8.	MCA-24P	DBMS Lab	0	0	3	50	50	100	2
9.	MCA-25P	Data Structures & Analysis of Algorithms Lab	0	0	4	50	50	100	2
		Total						1050	23

L/T/P: Lecture/ Tutorial/ Practical

* Qualifying Non-credit Course

MASTER OF COMPUTER APPLICATION (MCA)

MCA SECOND YEAR, 2021-22

SEMESTER-III

S. No.	Subject Code	Subject Name	Periods			Sessional			ESE	Total	Credit
			L	T	P	CT	TA	Total			
1.	MCA-31	Artificial Intelligence	3	0	0	30	20	50	100	150	3
2.	MCA-32	Software Engineering	4	0	0	30	20	50	100	150	4
3.	MCA-33	Computer Based Optimization Techniques	3	1	0	30	20	50	100	150	4
4.		Elective-1	3	0	0	30	20	50	100	150	3
5.		Elective-2	3	1	0	30	20	50	100	150	3

4.	MCA-41P	Project	-	-	-	-	100	100	500	600	14
		Total								1050	23

CT: Class Test TA: Teacher Assessment

L/T/P: Lecture/ Tutorial/ Practical

** The Mini Project (6 weeks) conducted during summer break after II semester and will be assessed during III semester. The Course will be carried out at the Institute under the guidance of a Faculty Members.

Elective-1	MCA-01	Cryptography & Network Security
	MCA-02	Neural Network
	MCA-03	Software Project Management
	MCA-04	Big Data
	MCA-05	Introduction to Machine Learning

MASTER OF COMPUTER APPLICATION (MCA)

Elective-2	MCA-06	Web Technology
	MCA-07	Cloud Computing
	MCA-08	Simulation & Modeling
	MCA-09	Soft Computing
	MCA-10	Android Operating System

Elective-3	MCA-41	Blockchain Architecture
	MCA-42	Data Warehousing & Data Mining
	MCA-43	Pattern Recognition
	MCA-44	Data Analytics
	MCA-45	Computer Networks

Elective-4	MCA-46	Digital Image Processing
	MCA-47	Software Testing and Quality Assurance
	MCA-48	Internet of Things
	MCA-49	Modern Application Development
	MCA-50	Distributed Database Systems

Elective-5	MCA-51	Mobile Computing
	MCA-52	Computer Graphics and Animation
	MCA-53	Natural Language Processing
	MCA-54	Compiler Design
	MCA-55	Deep Learning

Syllabus

MCA 1st Year

1st Semester

**MASTER OF COMPUTER APPLICATION (MCA)
MCA (MASTER OF COMPUTER APPLICATION)**

FIRST YEAR SYLLABUS SEMESTER-I

K₁=Remember, **K₂**=Understand, **K₃**=Apply, **K₄**=Analyze, **K₅**=Evaluate, **K₆**=Create

MCA-11: FUNDAMENTAL OF COMPUTERS & EMERGING TECHNOLOGIES		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Demonstrate the knowledge of the basic structure, components, features and generations of computers.	K ₁ , K ₂
CO 2	Describe the concept of computer languages, language translators and construct algorithms to solve problems using programming concepts.	K ₂ , K ₃
CO 3	Compare and contrast features, functioning & types of operating system and computer networks.	K ₄
CO 4	Demonstrate architecture, functioning & services of the Internet and basics of multimedia.	K ₂
CO 5	Illustrate the emerging trends and technologies in the field of Information Technology.	K ₁ , K ₂
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction to Computer: Definition, Computer Hardware & Computer Software Components: Hardware – Introduction, Input devices, Output devices, Central Processing Unit, Memory- Primary and Secondary. Software - Introduction, Types – System and Application. Computer Languages: Introduction, Concept of Compiler, Interpreter & Assembler Problem solving concept: Algorithms – Introduction, Definition, Characteristics, Limitations, Conditions in pseudo-code, Loops in pseudo code.	08
II	Operating system: Definition, Functions, Types, Classification, Elements of command based and GUI based operating system. Computer Network: Overview, Types (LAN, WAN and MAN), Data communication, topologies.	08
III	Internet : Overview, Architecture, Functioning, Basic services like WWW, FTP, Telnet, Gopher etc., Search engines, E-mail, Web Browsers. Internet of Things (IoT): Definition, Sensors, their types and features, Smart Cities, Industrial Internet of Things.	08
IV	Block chain: Introduction, overview, features, limitations and application areas fundamentals of Block Chain. Crypto currencies: Introduction , Applications and use cases Cloud Computing: It nature and benefits, AWS, Google, Microsoft & IBM Services	08
V	Emerging Technologies: Introduction, overview, features, limitations and application areas of Augmented Reality , Virtual Reality, Grid computing, Green computing, Big data analytics, Quantum Computing and Brain Computer Interface	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Rajaraman V., “Fundamentals of Computers”, Prentice-Hall of India. 2. Norton P., “Introduction to Computers”, McGraw Hill Education. 3. Goel A., “Computer Fundamentals”, Pearson. 4. Balagurusamy E., “ Fundamentals of Computers”, McGraw Hill 5. Thareja R., “Fundamentals of Computers”, Oxford University Press. 6. Bindra J., “The Tech Whisperer- on Digital Transformation and the Technologies that Enable it ”, Penguin 		

MASTER OF COMPUTER APPLICATION (MCA)

MASTER OF COMPUTER APPLICATION (MCA)**MCA-12 :PROBLEM SOLVING USING C**

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Describe the functional components and fundamental concepts of a digital computer system including number systems.	K1, K2
CO 2	Construct flowchart and write algorithms for solving basic problems.	K2, K3
CO 3	Write 'C' programs that incorporate use of variables, operators and expressions along with data types.	K2, K3
CO 4	Write simple programs using the basic elements like control statements, functions, arrays and strings.	K2, K3
CO 5	Write advanced programs using the concepts of pointers, structures, unions and enumerated data types.	K2, K3
CO 6	Apply pre-processor directives and basic file handling and graphics operations in advanced programming.	K2, K3
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Basics of programming: Approaches to problem solving, Use of high level programming language for systematic development of programs, Concept of algorithm and flowchart, Concept and role of structured programming. Basics of C: History of C, Salient features of C, Structure of C Program, Compiling C Program, Link and Run C Program, Character set, Tokens, Keywords, Identifiers, Constants, Variables, Instructions, Data types, Standard Input/Output, Operators and expressions.	08
II	Conditional Program Execution: if, if-else, and nested if-else statements, Switch statements, Restrictions on switch values, Use of break and default with switch, Comparison of switch and if-else. Loops and Iteration: for, while and do-while loops, Multiple loop variables, Nested loops, Assignment operators, break and continue statement. Functions: Introduction, Types, Declaration of a Function, Function calls, Defining functions, Function Prototypes, Passing arguments to a function Return values and their types, Writing multifunction program, Calling function by value, Recursive functions.	08
III	Arrays: Array notation and representation, Declaring one-dimensional array, Initializing arrays, Accessing array elements, Manipulating array elements, Arrays of unknown or varying size, Two-dimensional arrays, Multidimensional arrays. Pointers: Introduction, Characteristics, * and & operators, Pointer type declaration and assignment, Pointer arithmetic, Call by reference, Passing pointers to functions, arrayof pointers, Pointers to functions, Pointer to pointer, Array of pointers. Strings: Introduction, Initializing strings, Accessing string elements, Array of strings, Passing strings to functions, String functions.	08

MASTER OF COMPUTER APPLICATION (MCA)

IV	<p>Structure: Introduction, Initializing, defining and declaring structure, Accessing members, Operations on individual members, Operations on structures, Structure within structure, Array of structure, Pointers to structure.</p> <p>Union: Introduction, Declaring union, Usage of unions, Operations on union. Enumerated data types</p> <p>Storage classes: Introduction, Types- automatic, register, static and external.</p>	08
V	<p>Dynamic Memory Allocation: Introduction, Library functions – malloc, calloc, realloc and free.</p> <p>File Handling: Basics, File types, File operations, File pointer, File opening modes, File handling functions, File handling through command line argument, Record I/O in files.</p> <p>Graphics: Introduction, Constant, Data types and global variables used in graphics, Library functions used in drawing, Drawing and filling images, GUI interaction within the program.</p>	08

MASTER OF COMPUTER APPLICATION (MCA)

MCA-13 : Principles of Management & Communication		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to		
CO 1	Describe primary features, processes and principles of management.	K ₁ , K ₂
CO 2	Explain functions of management in terms of planning, decision making and organizing.	K ₃ , K ₄
CO 3	Illustrate key factors of leadership skill in directing and controlling business resources and processes.	K ₅ , K ₆
CO 4	Exhibit adequate verbal and non-verbal communication skills	K ₁ , K ₃
CO 5	Demonstrate effective discussion, presentation and writing skills.	K ₃ , K ₅
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Management: Need, Scope, Meaning and Definition. The process of Management, Development of Management thought F.W. Taylor and Henry Fayol, Horothorne Studies, Qualities of an Efficient Management.	08
II	Planning & Organising: Need, Scope and Importance of Planning, Steps in planning, Decision making model. Organising need and Importance, Organisational Design, Organisational structure, centralisation and Decentralisation, Deligation.	08
III	Directing & Controlling: Motivation—Meaning, Importance, need.Theories of Motivation, Leadership—meaning, need and importance, leadership style, Qualities of effective leader, principles of directing, Basic control process, Different control Techniques.	08
IV	Introduction to Communication: What is Communication, Levels of communication, Barriers to communication, Process of Communication, Non-verbal Communication, The flow of Communication: Downward, Upward, Lateral or Horizontal (Peer group) Communication, Technology Enabled communication, Impact of Technology, Selection of appropriate communication Technology, Importance of Technical communication.	08
V	Business letters : Sales & Credit letters; Claim and Adjustment Letters; Job application and Resumes. Reports: Types; Structure, Style & Writing of Reports. Technical Proposal: Parts; Types; Writing of Proposal; Significance. Nuances of Delivery; Body Language; Dimensions of Speech: Syllable; Accent; Pitch; Rhythm; Intonation; Paralinguistic features of voice; Communication skills, Presentation strategies, Group Discussion; Interview skills; Workshop; Conference; Seminars.	08
Suggested Readings:

MASTER OF COMPUTER APPLICATION (MCA)

MCA-14 : Discrete Mathematics

Course Outcome (CO)

At the end of course , the student will be able to

CO 1	Use mathematical and logical notation to define and formally reason about basic discrete structures such as Sets, Relations and Functions	K ₁ , K ₂
CO 2	Apply mathematical arguments using logical connectives and quantifiers to check the validity of an argument through truth tables and propositional and predicate logic	K ₂ , K ₃
CO 3	Identify and prove properties of Algebraic Structures like Groups, Rings and Fields	K ₃ , K ₄
CO 4	Formulate and solve recurrences and recursive functions	K ₃ , K ₄
CO 5	Apply the concept of combinatorics to solve basic problems in discrete mathematics	K ₁ , K ₃

DETAILED SYLLABUS

Unit	Topic	Proposed Lecture
I	Set Theory: Introduction, Size of sets and Cardinals, Venn diagrams, Combination of sets, Multisets, Ordered pairs and Set Identities. Relation: Definition, Operations on relations, Composite relations, Properties of relations, Equality of relations, Partial order relation. Functions: Definition, Classification of functions, Operations on functions, Recursively defined functions.	08
II	Posets, Hasse Diagram and Lattices: Introduction, Partial ordered sets, Combination of Partial ordered sets, Hasse diagram, Introduction of lattices, Properties of lattices – Bounded, Complemented, Modular and Complete lattice. Boolean Algebra: Introduction, Axioms and Theorems of Boolean algebra, Boolean functions. Simplification of Boolean functions, Karnaugh maps, Logic gates.	08
III	Propositional: Propositions, Truth tables, Tautology, Contradiction, Algebra of Propositions, Theory of Inference and Natural Detection. Predicate Logic: Theory of Predicates, First order predicate, Predicate formulas, Quantifiers, Inference theory of predicate logic.	08
IV	Algebraic Structures: Introduction to algebraic Structures and properties. Types of algebraic structures: Semi group, Monoid, Group, Abelian group and Properties of group. Subgroup, Cyclic group, Cosets, Permutation groups, Homomorphism and Isomorphism of groups. Rings and Fields: Definition and elementary properties of Rings and Fields.	08
V	Natural Numbers: Introduction, Piano's axioms, Mathematical Induction, Strong Induction and Induction with Nonzero Base cases. Recurrence Relation & Generating functions: Introduction and properties of Generating Functions. Simple Recurrence relation with constant coefficients and Linear recurrence relation without constant coefficients. Methods of solving recurrences. Combinatorics: Introduction, Counting techniques and Pigeonhole principle, Polya's Counting theorem.	08

MASTER OF COMPUTER APPLICATION (MCA)

MCA-15 : COMPUTER ORGANIZATION & ARCHITECTURE

Course Outcome (CO)

At the end of course , the student will be able to

CO 1	Describe functional units of digital system and explain how arithmetic and logical operations are performed by computers	K ₂ , K ₃
CO 2	Describe the operations of control unit and write sequence of instructions for carrying out simple operation using various addressing modes.	K ₂ , K ₄
CO 3	Design various types of memory and its organization.	K ₃
CO 4	Describe the various modes in which IO devices communicate with CPU and memory.	K ₂ , K ₃
CO 5	List the criteria for classification of parallel computer and describe various architectural schemes.	K ₁ , K ₂

DETAILED SYLLABUS

Unit	Topic	Proposed Lecture
I	Introduction: Functional units of digital system and their interconnections, buses, bus architecture, types of buses and bus arbitration. Register, bus and memory transfer. Processor organization: general registers organization, stack organization and addressing modes.	08
II	Arithmetic and logic unit: Look ahead carries adders. Multiplication: Signed operand multiplication, Booths algorithm and array multiplier. Division and logic operations. Floating point arithmetic operation, Arithmetic & logic unit design. IEEE Standard for Floating Point Numbers.	08
III	Control Unit: Instruction types, formats, instruction cycles and sub cycles (fetch and execute etc), micro operations, execution of a complete instruction. Program Control, Reduced Instruction Set Computer, Pipelining. Hardwire and micro programmed control: micro-program sequencing, concept of horizontal and vertical microprogramming.	08
IV	Memory: Basic concept and hierarchy, semiconductor RAM memories, 2D & 2 1/2D memory organization. ROM memories. Cache memories: concept and design issues & performance, address mapping and replacement Auxiliary memories: magnetic disk, magnetic tape and optical disks Virtual memory: concept implementation.	08
V	Input / Output: Peripheral devices, I/O interface, I/O ports, Interrupts: interrupt hardware, types of interrupts and exceptions. Modes of Data Transfer: Programmed I/O, interrupt initiated I/O and Direct Memory Access., I/O channels and processors. Serial Communication: Synchronous & asynchronous communication, standard communication interfaces.	08

MCA-12P: PROBLEM SOLVING USING C LAB

	Course Outcome (CO)	Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Write, compile, debug and execute programs in a C programming environment.	K ₃
CO2	Write programs that incorporate use of variables, operators and expressions along with data types.	K ₃
CO3	Write programs for solving problems involving use of decision control structures and loops.	K ₃
CO4	Write programs that involve the use of arrays, structures and user defined functions.	K ₃
CO5	Write programs using graphics and file handling operations.	K ₃

1. Program to implement conditional statements in C language.
2. Program to implement switch-case statement in C language
3. Program to implement looping constructs in C language.
4. Program to perform basic input-output operations in C language.
5. Program to implement user defined functions in C language.
6. Program to implement recursive functions in C language.
7. Program to implement one-dimensional arrays in C language.
8. Program to implement two-dimensional arrays in C language.
9. Program to perform various operations on two-dimensional arrays in C language.
10. Program to implement multi-dimensional arrays in C language.
11. Program to implement string manipulation functions in C language.
12. Program to implement structure in C language.
13. Program to implement union in C language.
14. Program to perform file handling operations in C language.
15. Program to perform graphical operations in C language.

Note: The Instructor may add/delete/modify experiments, wherever he/she feels in a justified manner.

MASTER OF COMPUTER APPLICATION (MCA)

MCA-15P: COMPUTER ORGANIZATION & ARCHITECTURE LAB

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Design and verify combinational circuits (adder, code converter, decoder, multiplexer) using basic gates.	K ₆
CO2	Design and verify various flip-flops.	K ₃
CO3	Design I/O system and ALU.	K ₃
CO4	Demonstrate combinational circuit using simulator	K ₂
<ol style="list-style-type: none"> 1. Implementing HALF ADDER, FULL ADDER using basic logic gates. 2. Implementing Binary -to -Gray, Gray -to -Binary code conversions. 3. Implementing 3-8 line DECODER. Implementing 4x1 and 8x1 MULTIPLEXERS. 4. Verify the excitation tables of various FLIP-FLOPS. 5. Design of an 8-bit Input/ Output system with four 8-bit Internal Registers. 6. Design of an 8-bit ARITHMETIC LOGIC UNIT. 7. Design the data path of a computer from its register transfer language description. 8. Design the control unit of a computer using either hardwiring or microprogramming based on its register transfer language description. 9. Implement a simple instruction set computer with a control unit and a data path. <p>Note: The Instructor may add/delete/modify/tune experiments, wherever he/she feels in a justified manner.</p>

MASTER OF COMPUTER APPLICATION (MCA)**MCA-16P : PROFESSIONAL COMMUNICATION LAB**

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO1	Develop the ability to work as a team member as an integral activity in the workplace.	K₃
CO2	Increase confidence in their ability to read, comprehend, organize, and retain written information. Improve reading fluency.	K₄
CO3	Write coherent speech outlines that demonstrate their ability to use organizational formats with a specific purpose; Deliver effective speeches that are consistent with and appropriate for the audience and purpose.	K₅,K₆
CO4	Develop proper listening skills; articulate and enunciate words and sentences clearly and efficiently.	K₃
CO5	Show confidence and clarity in public speaking projects; be schooled in preparation and research skills for oral presentations.	K₅

1. Group Discussion: participating in group discussions- understanding group dynamics.
2. GD strategies-activities to improve GD skills. Practical based on Accurate and Current Grammatical Patterns.
3. Interview Etiquette-dress code, body language attending job interview – Telephone/Skype interview one to one interview & Panel interview.
4. Communication Skills for Seminars/Conferences/Workshops with emphasis on Paralinguistic/ Kinesics, practicing word stress, rhythm in sentences, weak forms, intonation.
5. Oral Presentation Skills for Technical Paper/Project Reports/ Professional Reports based on proper Stress and Intonation Mechanics voice modulation ,Audience Awareness, Presentation plan visual aids.
6. Speaking:-Fluency & Accuracy in speech- positive thinking, Improving Self expression Developing persuasive speaking skills, pronunciation practice (for accept neutralization) particularly of problem sounds, in isolated words as well as sentences.
7. Individual Speech Delivery/Conferences with skills to defend Interjections/Quizzes.
8. Argumentative Skills/Role Play Presentation with Stress and Intonation.
9. Comprehension Skills based on Reading and Listening Practical's on a model Audio-Visual Usage.

Syllabus

MCA 1st Year

IInd Semester

**MASTER OF COMPUTER APPLICATION (MCA)
FIRST YEAR SYLLABUS SEMESTER-II**

MCA-21: THEORY OF AUTOMATA & FORMAL LANGUAGES		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Define various types of automata for different classes of formal languages and explain their working.	K ₁ , K ₂
CO 2	State and prove key properties of formal languages and automata.	K ₁ , K ₃
CO 3	Construct appropriate formal notations (such as grammars, acceptors, transducers and regular expressions) for given formal languages.	K ₃ , K ₄
CO 4	Convert among equivalent notations for formal languages.	K ₃
CO 5	Explain the significance of the Universal Turing machine, Church-Turing thesis and concept of Undecidability.	K ₂
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Basic Concepts and Automata Theory: Introduction to Theory of Computation- Automata, Computability and Complexity, Alphabet, Symbol, String, Formal Languages, Deterministic Finite Automaton (DFA)- Definition, Representation, Acceptability of a String and Language, Non Deterministic Finite Automaton (NFA), Equivalence of DFA and NFA, NFA with ϵ -Transition, Equivalence of NFA's with and without ϵ -Transition, Finite Automata with output- Moore machine, Mealy Machine, Equivalence of Moore and Mealy Machine, Minimization of Finite Automata, Myhill-Nerode Theorem, Simulation of DFA and NFA.	08
II	Regular Expressions and Languages: Regular Expressions, Transition Graph, Kleen's Theorem, Finite Automata and Regular Expression- Arden's theorem, Algebraic Method Using Arden's Theorem, Regular and Non-Regular Languages- Closure properties of Regular Languages, Pigeonhole Principle, Pumping Lemma, Application of Pumping Lemma, Decidability- Decision properties, Finite Automata and Regular Languages, Regular Languages and Computers, Simulation of Transition Graph and Regular language.	08
III	Regular and Non-Regular Grammars: Context Free Grammar (CFG)- Definition, Derivations, Languages, Derivation Trees and Ambiguity, Regular Grammars- Right Linear and Left Linear grammars, Conversion of FA into CFG and Regular grammar into FA, Simplification of CFG, Normal Forms- Chomsky Normal Form (CNF), Greibach Normal Form (GNF), Chomsky Hierarchy, Programming problems based on the properties of CFGs.	08
IV	Push Down Automata and Properties of Context Free Languages: Nondeterministic Pushdown Automata (NPDA)- Definition, Moves, A Language Accepted by NPDA, Deterministic Pushdown Automata (DPDA) and Deterministic Context free Languages (DCFL), Pushdown Automata for Context Free Languages, Context Free grammars for Pushdown Automata, Two stack Pushdown Automata, Pumping Lemma for CFL, Closure properties of CFL, Decision Problems of CFL, Programming problems based on the properties of CFLs.	08

MASTER OF COMPUTER APPLICATION (MCA)

V	Turing Machines and Recursive Function Theory : Basic Turing Machine Model, Representation of Turing Machines, Language Acceptability of Turing Machines, Techniques for Turing Machine Construction, Modifications of Turing Machine, Turing Machine as Computer of Integer Functions, Universal Turing machine, Linear Bounded Automata, Church's Thesis, Recursive and Recursively Enumerable language, Halting Problem, Post Correspondence Problem, Introduction to Recursive Function Theory.	08
----------	--	-----------

Suggested Readings:

1. J.E. Hopcraft, R. Motwani, and Ullman, "Introduction to Automata theory, Languages and Computation", Pearson EducationAsia, 2nd Edition.
2. J. Martin, "Introduction to languages and the theory of computation", McGraw Hill, 3rd Edition.
3. C. Papadimitrou and C. L. Lewis, "Elements and Theory of Computation", PHI.
4. K.L.P. Mishra and N. Chandrasekaran, "Theory of Computer Science Automata Languages and Computation", PHI.
5. Y.N. Singh, "Mathematical Foundation of Computer Science", New Age International.

MASTER OF COMPUTER APPLICATION (MCA)

MCA-22 : OBJECT ORIENTED PROGRAMMING

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	List the significance and key features of object oriented programming and modeling using UML	K ₄
CO 2	Construct basic structural, behavioral and architectural models using object oriented software engineering approach.	K ₆
CO 3	Integrate object oriented modeling techniques for analysis and design of a system.	K ₄ , K ₅
CO 4	Use the basic features of data abstraction and encapsulation in C++ programs.	K ₄
CO 5	Use the advanced features such as Inheritance, polymorphism and virtual function in C++ programs.	K ₃ , K ₄
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction: Object Oriented Programming: objects, classes, Abstraction, Encapsulation, Inheritance, Polymorphism, OOP in Java, Characteristics of Java, The Java Environment, Java Source File Structure, and Compilation. Fundamental Programming Structures in Java: Defining classes in Java, constructors, methods, access specifiers, static members, Comments, Data Types, Variables, Operators, Control Flow, Arrays.	08
II	Inheritance, Interfaces, and Packages: Inheritance: Super classes, sub classes, Protected members, constructors in sub classes, Object class, abstract classes and methods. Interfaces: defining an interface, implementing interface, differences between classes and interfaces and extending interfaces, Object cloning, inner classes. Packages: Defining Package, CLASSPATH Setting for Packages, Making JAR Files for Library Packages, Import and Static Import Naming Convention For Packages, Networking java.net package.	08
III	Exception Handling, I/O: Exceptions: exception hierarchy, throwing and catching exceptions, built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics: Byte streams and Character streams, Reading and Writing, Console Reading and Writing Files.	08
IV	Multithreading and Generic Programming: Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter-thread communication, daemon threads, thread groups. Generic Programming: Generic classes, generic methods, Bounded Types: Restrictions and Limitations.	08
V	Event Driven Programming: Graphics programming: Frame, Components, working with 2D shapes, Using colors, fonts, and images. Basics of event handling: event handlers, adapter classes, actions, mouse events, AWT event hierarchy. Introduction to Swing: layout management, Swing Components: Text Fields, Text Areas, Buttons, Check Boxes, Radio Buttons, Lists, choices, Scrollbars, Windows Menus and Dialog Boxes.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Herbert Schildt, "Java The complete referencel", McGraw Hill Education, 8th Edition, 2011. 2. Cay S. Horstmann, Gary Cornell, "Core Java Volume –I Fundamentals", Prentice Hall, 9th Edition, 2013. 3. Steven Holzner, "Java Black Book", Dreamtech. 4. Balagurusamy E, " Programming in Java", McGraw Hill 5. Naughton, Schildt, "The Complete reference java2", McGraw Hill 6. Khalid Mughal, "A Programmer's Guide to Java SE 8 Oracle Certified Associate (OCA)", Addison-Wesley.

MASTER OF COMPUTER APPLICATION (MCA)

MCA-23 : OPERATING SYSTEMS

Course Outcome (CO)	Bloom's Knowledge Level (KL)
At the end of course , the student will be able to	
CO 1	Explain main components, services, types and structure of Operating Systems. K₂
CO 2	Apply the various algorithms and techniques to handle the various concurrency control issues. K₃
CO 3	Compare and apply various CPU scheduling algorithms for process execution. K₂
CO 4	Identify occurrence of deadlock and describe ways to handle it. K₃
CO 5	Explain and apply various memory, I/O and disk management techniques. K₅

DETAILED SYLLABUS

Unit	Topic	Proposed Lecture
I	Introduction: Operating System Structure- Layered structure, System Components, Operating system functions, Classification of Operating systems- Batch, Interactive, Time sharing, Real Time System, Multiprocessor Systems, Multiuser Systems, Multi process Systems, Multithreaded Systems, Operating System services, Reentrant Kernels, Monolithic and Microkernel Systems.	08
II	Concurrent Processes: Process Concept, Principle of Concurrency, Producer / Consumer Problem, Mutual Exclusion, Critical Section Problem, Dekker's solution, Peterson's solution, Semaphores, Test and Set operation, Classical Problem in Concurrency- Dining Philosopher Problem, Sleeping Barber Problem, Inter Process Communication models and Schemes, Process generation.	08
III	CPU Scheduling: Scheduling Concepts, Performance Criteria, Process States, Process Transition Diagram, Schedulers, Process Control Block (PCB), Process address space, Process identification information, Threads and their management, Scheduling Algorithms, Multiprocessor Scheduling. Deadlock: System model, Deadlock characterization, Prevention, Avoidance and detection, Recovery from deadlock.	08
IV	Memory Management: Basic bare machine, Resident monitor, Multiprogramming with fixed partitions, Multiprogramming with variable partitions, Protection schemes, Paging, Segmentation, Paged segmentation, Virtual memory concepts, Demand paging, Performance of demand paging, Page replacement algorithms, Thrashing, Cache memory organization, Locality of reference.	08
V	I/O Management and Disk Scheduling: I/O devices, and I/O subsystems, I/O buffering, Disk storage and disk scheduling, RAID. File System: File concept, File organization and access mechanism, File directories, and File sharing, File system implementation issues, File system protection and security.	08

Suggested Readings:

1. Silberschatz, Galvin and Gagne, "Operating Systems Concepts", Wiley Publication.
2. Sibsankar Halder and Alex A Arvind, "Operating Systems", Pearson Education.
3. Harvey M Dietel, "An Introduction to Operating System", Pearson Education.
4. William Stallings, "Operating Systems: Internals and Design Principles", 6th Edition, Pearson Education.
5. Harris, Schaum's Outline Of Operating Systems, McGraw Hill

MASTER OF COMPUTER APPLICATION (MCA)

MCA-24 DATABASE MANAGEMENT SYSTEMS		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Describe the features of a database system and its application and compare various types of data models.	K ₂
CO 2	Construct an ER Model for a given problem and transform it into a relation database schema.	K ₅ , K ₆
CO 3	Formulate solution to a query problem using SQL Commands, relational algebra, tuple calculus and domain calculus.	K ₅ , K ₆
CO 4	Explain the need of normalization and normalize a given relation to the desired normal form.	K ₂ , K ₃
CO 5	Explain different approaches of transaction processing and concurrency control.	K ₂
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction: Overview, Database System vs File System, Database System Concept and Architecture, Data Model Schema and Instances, Data Independence and Database Language and Interfaces, Data Definitions Language, DML, Overall Database Structure. Data Modeling Using the Entity Relationship Model: ER Model Concepts, Notation for ER Diagram, Mapping Constraints, Keys, Concepts of Super Key, Candidate Key, Primary Key, Generalization, Aggregation, Reduction of an ER Diagrams to Tables, Extended ER Model, Relationship of Higher Degree.	08
II	Relational data Model and Language: Relational Data Model Concepts, Integrity Constraints, Entity Integrity, Referential Integrity, Keys Constraints, Domain Constraints, Relational Algebra, Relational Calculus, Tuple and Domain Calculus. Introduction to SQL: Characteristics of SQL, Advantage of SQL. SQL Data Type and Literals. Types of SQL Commands. SQL Operators and their Procedure. Tables, Views and Indexes. Queries and Sub Queries. Aggregate Functions. Insert, Update and Delete Operations, Joins, Unions, Intersection, Minus, Cursors, Triggers, Procedures in SQL/PL SQL	08
III	Data Base Design & Normalization: Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependence, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design	08
IV	Transaction Processing Concept: Transaction System, Testing of Serializability, Serializability of Schedules, Conflict & View Serializable Schedule, Recoverability, Recovery from Transaction Failures, Log Based Recovery, Checkpoints, Deadlock Handling. Distributed Database: Distributed Data Storage, Concurrency Control, Directory System	08
V	Concurrency Control Techniques: Concurrency Control, Locking Techniques for Concurrency Control, Time Stamping Protocols for Concurrency Control, Validation Based Protocol, Multiple Granularity, Multi Version Schemes, Recovery with Concurrent Transaction, Case Study of Oracle.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Korth, Silbertz, Sudarshan," Database Concepts", McGraw Hill. 2. Date C J, "An Introduction to Database Systems", Addison Wesley. 3. MASTER OF COMPUTER APPLICATION (MCA)

MCA-25: DATA STRUCTURES & ANALYSIS OF ALGORITHMS

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Explain the concept of data structure, abstract data types, algorithms, analysis of algorithms and basic data organization schemes such as arrays and linked lists.	K ₂
CO 2	Describe the applications of stacks and queues and implement various operations on them using arrays and linked lists.	K ₃
CO 3	Describe the properties of graphs and trees and implement various operations such as searching and traversal on them.	K ₃
CO 4	Compare incremental and divide-and-conquer approaches of designing algorithms for problems such as sorting and searching.	K ₄
CO 5	Apply and analyze various design approaches such as Divide-and-Conquer, greedy and dynamic for problem solving .	K ₄
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	<p>Introduction to data structure: Data, Entity, Information, Difference between Data and Information, Data type , Build in data type, Abstract data type, Definition of data structures, Types of Data Structures: Linear and Non-Linear Data Structure, Introduction to Algorithms: Definition of Algorithms, Difference between algorithm and programs, properties of algorithm, Algorithm Design Techniques, Performance Analysis of Algorithms, Complexity of various code structures, Order of Growth, Asymptotic Notations.</p> <p>Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Derivation of Index Formulae for 1-D,2-D Array Application of arrays, Sparse Matrices and their representations.</p> <p>Linked lists: Array Implementation and Pointer Implementation of Singly Linked Lists, Doubly Linked List, Circularly Linked List, Operations on a Linked List. Insertion, Deletion, Traversal, Polynomial Representation and Addition Subtraction & Multiplications of Single variable.</p>	08
II	<p>Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application of stack: Prefix and Postfix Expressions, Evaluation of postfix expression, Iteration and Recursion- Principles of recursion, Tail recursion, Removal of recursion Problem solving using iteration and recursion with examples such as binary search, Fibonacci numbers, and Hanoi towers.</p> <p>Queues: Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Array and linked implementation of queues in C, Dequeue and Priority Queue.</p> <p>Searching: Concept of Searching, Sequential search, Index Sequential Search, Binary Search. Concept of Hashing & Collision resolution Techniques used in Hashing.</p>	08

MASTER OF COMPUTER APPLICATION (MCA)

III	<p>Sorting: Insertion Sort, Selection Sort, Bubble Sort, Heap Sort, Comparison of Sorting Algorithms, Sorting in Linear Time: Counting Sort and Bucket Sort.</p> <p>Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency Matrices, Adjacency List, Adjacency. Graph Traversal: Depth First Search and Breadth First Search, Connected Component.</p>	08
IV	<p>Trees: Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Complete Binary Tree, A Extended Binary Trees, Tree Traversal algorithms: Inorder, Preorder and Postorder, Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search Tree.</p> <p>Threaded Binary trees, Huffman coding using Binary Tree, AVL Tree and B Tree.</p>	08
V	<p>Divide and Conquer with Examples Such as Merge Sort, Quick Sort, Matrix Multiplication: Strassen's Algorithm</p> <p>Dynamic Programming: Dijkstra Algorithm, Bellman Ford Algorithm, All-pair Shortest Path: Warshal Algorithm, Longest Common Sub-sequence</p> <p>Greedy Programming: Prims and Kruskal algorithm.</p>	08

MAC-21: CYBER SECURITY

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to		
CO 1	Identify and analyze nature & inherent difficulties in the security of the Information System.	K ₃
CO 2	Analyze various threats and attacks, corresponding counter measures and various vulnerability assessment and security techniques in an organization.	K ₃
CO 3	Applications of cyber based policies and use of IPR and patent law for software-based design. Define E-commerce types and threats to E-commerce.	K ₁ ,K ₂
CO 4	Explain concepts and theories of networking and apply them to various situations, classifying networks, analyzing performance.	K ₂
DETAILED SYLLABUS		2-0-0
Unit	Topic	Proposed Lecture
	Course outcome:- CO 1 Identify and analyze nature & inherent difficulties in the security of the Information System. CO 2 Analyze various threats and attacks, corresponding counter measures and various vulnerability assessment and security techniques in an organization. CO 3 Applications of cyber based policies and use of IPR and patent law for software-based design. Define E-commerce types and threats to E-commerce. CO 4 Explain concepts and theories of networking and apply them to various situations, classifying networks, analyzing performance.	
I	Introduction- Introduction to Information Systems, Types of Information Systems, Development of Information Systems, Introduction to Information Security and CIA triad, Need for Information Security, Threats to Information Systems, Information Assurance and Security Risk Analysis, Cyber Security.	08
II	Application Security- (Database, E-mail and Internet), Data Security Considerations-(Backups, Archival Storage and Disposal of Data), Security Technology-(Firewall , VPNs, Intrusion Detection System), Access Control. Security Threats -Viruses, Worms, Trojan Horse, Bombs, Trapdoors, Spoofs, E-mail Viruses, Macro Viruses, Malicious Software, Network and Denial of Services Attack.	08
III	Introduction to E-Commerce , Threats to E-Commerce, Electronic Payment System, e- Cash, Credit/Debit Cards. Digital Signature, Cryptography Developing Secure Information Systems, Application Development Security, Information Security Governance & Risk Management, Security Architecture & Design Security Issues in Hardware, Data Storage & Downloadable Devices, Physical Security of IT Assets - Access Control, CCTV, Backup Security Measures.	08
IV	Security Policies- Why policies should be developed, Policy Review Process, Publication and Notification Requirement of policies, Types of policies – WWW policies, Email Security policies, Corporate Policies, Sample Security Policies. Case Study – Corporate Security	08

MASTER OF COMPUTER APPLICATION (MCA)

V	Information Security Standards-ISO, IT Act, Copyright Act, IPR. Cyber Crimes , Cyber Laws in India; IT Act 2000 Provisions, Intellectual Property Law, Copy Right Law , Semiconductor Law and Patent Law , Software Piracy and Software License.	08

SECOND YEAR SYLLABUS
SEMESTER-III

MASTER OF COMPUTER APPLICATION (MCA)

MCA31: Artificial Intelligence		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Define the meaning of intelligence and study various intelligent agents.	K ₁
CO 2	Understand, analyze and apply AI searching algorithms in different problem domains.	K ₂ , K ₃ , K ₄
CO 3	Study and analyze various models for knowledge representation.	K ₁ , K ₃
CO 4	Understand the basic concepts of machine learning to analyze and implement widely used learning methods and algorithms.	K ₂ , K ₄ , K ₆
CO 5	Understand the concept of pattern recognition and evaluate various classification and clustering techniques	K ₂ , K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Artificial Intelligence: Introduction to artificial intelligence, Historical development and foundation areas of artificial intelligence, Tasks and application areas of artificial intelligence. Introduction, types and structure of intelligent agents, Computer Vision, Natural language processing.	08
II	Searching Techniques: Introduction, Problem solving by searching, Searching for solutions, Uniformed searching techniques, Informed searching techniques, Local search algorithms, Adversarial search methods, Search techniques used in games, Alpha-Beta pruning.	08
III	Knowledge Representation and Reasoning: Propositional logic, Predicate logic, First order logic, Inference in first order logic, Clause form conversion, Resolution. Chaining- concept, forward chaining and backward chaining, Utility theory and Probabilistic reasoning, Hidden Markov model, Bayesian networks.	08
IV	Machine Learning: Introduction, types and application areas, Decision trees, Statistical learning methods, Learning with complete data - concept and Naïve Bayes models, Learning with hidden data- concept and EM algorithm, Reinforcement learning.	08
V	Pattern Recognition: Introduction and design principles, Statistical pattern recognition, Parameter estimation methods - Principle component analysis and Linear discrimination analysis, Classification techniques - Nearest neighbor rule and Bayes classifier, K-means clustering, Support vector machine.	08

MASTER OF COMPUTER APPLICATION (MCA)

Suggested Readings:

1. Russell S. and Norvig P., "Artificial Intelligence – A Modern Approach", Pearson Education.
2. Rich E. and Knight K., "Artificial Intelligence", McGraw Hill Publications.
3. Charnik E. and McDermott D., "Introduction to Artificial Intelligence", Pearson Education.
4. Patterson D. W., "Artificial Intelligence and Expert Systems", Prentice Hall of India Publications.
5. Khemani D., "A First Course in Artificial Intelligence", McGraw Hill.
6. Winston P. H., "Artificial Intelligence", Pearson Education.
7. Thornton C. and Boulay B., "Artificial Intelligence- Strategies, Applications and Models through Search", New Age International Publishers.

MASTER OF COMPUTER APPLICATION (MCA)

MCA32: Software Engineering

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Explain various software characteristics and analyze different software DevelopmentModels.	K ₁ , K ₂
CO 2	Demonstrate the contents of a SRS and apply basic software quality assurance practices to ensure that design, development meet or exceed applicable standards.	K ₁ , K ₂
CO 3	Compare and contrast various methods for software design.	K ₂ , K ₃
CO 4	Formulate testing strategy for software systems, employ techniques such as unit testing, Test driven development and functional testing.	K ₃
CO 5	Manage software development process independently as well as in teams and make use of various software management tools for development, maintenance and analysis.	K ₅
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction: Introduction to Software Engineering, Software Components, Software Characteristics, Software Crisis, Software Engineering Processes, Similarity and Differences from Conventional Engineering Processes, Software Quality Attributes. Software Development Life Cycle (SDLC) Models: Water Fall Model, Prototype Model, Spiral Model, Evolutionary Development Models, Iterative Enhancement Models.	08
II	Software Requirement Specifications (SRS): Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modelling, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS. Software Quality Assurance (SQA): Verification and Validation, SQA Plans, Software Quality Frameworks, ISO 9000 Models, SEICMM Model.	08
III	Software Design: Basic Concept of Software Design, Architectural Design, Low Level Design: Modularization, Design Structure Charts, Pseudo Codes, Flow Charts, Coupling and Cohesion Measures, Design Strategies: Function Oriented Design, Object Oriented Design, Top-Down and Bottom-Up Design. Software Measurement and Metrics: Various Size Oriented Measures: Halstead's Software Science, Function Point (FP) Based Measures, Cyclomatic Complexity Measures: Control Flow Graphs.	08
IV	Software Testing: Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top Down and Bottom- Up Testing Strategies: Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Test Data Suit Preparation, Alpha and Beta Testing of Products. Static Testing Strategies: Formal Technical Reviews (Peer Reviews), Walk Through, Code Inspection, Compliance with Design and Coding Standards.	08

MASTER OF COMPUTER APPLICATION (MCA)

V	Software Maintenance and Software Project Management: Software as an Evolutionary Entity, Need for Maintenance, Categories of Maintenance: Preventive, Corrective and Perfective Maintenance, Cost of Maintenance, Software Re-Engineering, Reverse Engineering. Software Configuration Management Activities, Change Control Process, Software Version	08
	Control, An Overview of CASE Tools. Estimation of Various Parameters such as Cost, Efforts, Schedule/Duration, Constructive Cost Models (COCOMO), Resource Allocation Models, Software Risk Analysis and Management.	

Suggested Readings:

1. R S Pressman, "Software Engineering: A Practitioners Approach", McGraw Hill.
2. Pankaj Jalote, "Software Engineering", Wiley
3. Rajib Mall, "Fundamentals of Software Engineering", PHI Publication.
4. K K Aggarwal and Yogesh Singh, "Software Engineering", New Age International Publishers.
5. Ghezzi, M. Jarayeri, D. Manodrioli, "Fundamentals of Software Engineering", PHI Publication.
6. Ian Sommerville, "Software Engineering", Addison Wesley.
7. Kassem Saleh, "Software Engineering", Cengage Learning
8. Pfleeger, "Software Engineering", Macmillan Publication

MASTER OF COMPUTER APPLICATION (MCA)

MCA33: Computer Based Optimization Techniques		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Students will be able to describe characteristics and scope of OR and also to formulate LPP and obtain graphical solutions & acquire general idea of the simplex method.	K2
CO 2	To understand and solve transportation problem & assignment models.	K3
CO 3	To understand and solve integer linear programming and non-linear problems.	K4
CO 4	To know optimal inventory model and to identify right time for replacement of equipment.	K2
CO 5	Students will be able to evaluate optimum solution using dynamic programming for different applications and to understand concepts of queuing theory.	K2
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to OR & Linear Programming Problems (LPP): Nature and meaning of OR, Principles of Modeling, General methods for solving OR Models, Main characteristics of OR, Main phases of OR, Scope of OR, Role of OR in decision making. Definition of LPP, Graphical Solutions of Linear Programming Problems, Simplex Method and Artificial Variable Method, Two Phase Method, Big-M method, Duality, Dual Simplex Method.	08
II	Transportation Problems: Introduction to Transportation Model, Matrix form of TP, Various methods of finding Initial basic feasible solution-North West Corner Method, Least Cost Method & VAM Method. Technique for obtaining optimal basic feasible Solution using MODI Method, Maximization Transportation Problem. Assignment Problems: Hungarian Algorithm and its applications, Maximization Assignment Problem.	08
III	Integer Linear Programming Problems: Integer Linear Programming Problems, Mixed Integer Linear Programming Problems, Cutting Plane Method, Branch and Bound Method. Introduction to NLP: Definition of NLP, Convex Programming Problems, Quadratic Programming Problems, Wolfe's Method for Quadratic Programming, Kuhn-Tucker Conditions, Geometrical Interpretation of KTConditions, KT-Points etc.	08
IV	Inventory Models: Various costs-deterministic inventory models, Single period inventory model with shortest cost, Stochastic models, Application of inventory models, Economic lot sizes-price breaks. Replacement Problems: Capital equipment-discounting costs-replacement in anticipation of failure- group replacement-stochastic nature underlying the failure phenomenon.	08

MASTER OF COMPUTER APPLICATION (MCA)

V	<p>Dynamic Programming: Bellman's Principle of optimality of Dynamic Programming, Multistage decision problem and its solution by Dynamic Programming with finite number of stages, Solution of linear programming problems as a Dynamic Programming problem.</p> <p>Queuing Theory: Introduction to Queues, Characteristics of M/M/I Queue model, Role of Exponential and Poisson Distributions, Markovian Process, Erlang Distribution, Distribution of Arrivals, Distribution of Service Times, Definition of Steady and Transient State, Poisson Queues.</p>	08
----------	--	-----------

Suggested Readings:

1. Taha H. A., "Operations Research – An Introduction", Prentice-Hall India.
2. Wagner H. M., "Principles of Operations Research with Applications to Managerial Decisions", PHI.
3. Swarup K., "Operations Research", Sultan Chand & Sons.
4. Chawla K. K., Gupta V. and Bhushan K. S., "Operations Research- Quantitative Analysis for Management", Kalyani Publishers.
5. Sharma J. K. "Operations Research", Pearson, 3rd Edition.

ELECTIVE-1

MASTER OF COMPUTER APPLICATION (MCA)

MCA01: Cryptography & Network Security		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Understand various security attacks and their protection mechanism.	K ₂
CO 2	Apply and analyze various encryption algorithms.	K ₃ , K ₄
CO 3	Understand functions and algorithms to authenticate messages and study and apply different digital signature techniques.	K ₁ , K ₂ , K ₃
CO 4	Analyze different types of key distributions.	K ₄
CO 5	Study and appraise different IP and system security mechanism.	K ₁ , K ₅
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to security attacks, Services and mechanism, Classical encryption techniques substitution ciphers and transposition ciphers, Cryptanalysis, Steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, Feistel structure, Data encryption standard(DES), Strength of DES, Idea of differential cryptanalysis, Block cipher modes of operations, Triple DES	08
II	Introduction to group, field, finite field of the form GF(p), Modular arithmetic, Prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES). Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principals of public key crypto systems, RSA algorithm, Security of RSA	08
III	Message Authentication Codes: Authentication requirements, Authentication functions, Message authentication code, Hash functions, Birthday attacks, Security of hash functions, Secure hash algorithm (SHA). Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), Proof of digital signature algorithm.	08
IV	Key Management and distribution: Symmetric key distribution, DiffieHellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos Electronic mail security: pretty good privacy (PGP), S/MIME.	08
V	IP Security: Architecture, Authentication header, Encapsulating security payloads, Combining security associations, Key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET). System Security: Introductory idea of Intrusion, Intrusion detection, Viruses and related threats, firewalls.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Stallings W., "Cryptography and Network Security: Principals and Practice", Pearson Education. 2. Frouzan B. A., "Cryptography and Network Security", McGraw Hill. 3. Kahate A., "Cryptography and Network Security", Tata McGraw Hill. 		

MASTER OF COMPUTER APPLICATION (MCA)

MCA02:Neural Networks

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Study of basic concepts of Neuro Computing, Neuroscience and ANN. Understand the different supervised and unsupervised and neural networks performance.	K ₁ , K ₂
CO 2	Study of basic Models of neural network. Understand the Perception network. and Compare neural networks and their algorithm.	K ₁ , K ₂
CO 3	Study and Demonstrate different types of neural network. Make use of neural networks for specified problem domain.	K ₆
CO 4	Understand and Identify basic design requirements of recurrent network and Selforganizing feature map.	K ₂ , K ₅
CO 5	Able to understand the some special network. Able to understand the concept of Soft computing.	K ₂ , K ₅
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	Neurocomputing and Neuroscience: The human brain, biological neurons, neural processing, biological neural network. Artificial Neural Networks: Introduction, historical notes, neuron model, knowledge representation, comparison with biological neural network, applications. Learning process: Supervised learning, unsupervised learning, error correction learning, competitive learning, adaptation learning, Statistical nature of the learning process.	08
II	Basic Models: McCulloch-Pitts neuron model, Hebb net, activation functions, aggregation functions. Perceptron networks: Perceptron learning, single layer perceptron networks, multilayer perceptron networks. Least mean square algorithm, gradient descent rule, nonlinearly separable problems and bench mark problems in NN.	08
III	Multilayer neural network: Introduction, comparison with single layer networks. Back propagation network: Architecture, back propagation algorithm, local minima and global minima, heuristics for making back propagation algorithm performs better, applications. Radial basis function network: Architecture, training algorithm, approximation properties of RBF networks, comparison of radial basis function network and back propagation networks.	08
IV	Recurrent network: Introduction, architecture and types. Self-organizing feature map: Introduction, determining winner, Kohonen Self Organizing feature maps (SOM) architecture, SOM algorithm, properties of feature map; Learning vector quantization-architecture and algorithm. Principal component and independent component analysis.	08
V	Special networks: Cognitron, Support vector machines. Complex valued NN and complex valued BP. Soft computing: Introduction, Overview of techniques, Hybrid soft computing techniques.	08
Suggested Readings:		
1. Kumar S., "Neural Networks- A Classroom Approach", McGraw Hill. 2. Haykin S., "Neural Networks – A Comprehensive Foundation", Pearson Education. 3. Yegnanarayana B. "Artificial Neural Networks", Prentice Hall of India. 4. Freeman J. A., "Neural Networks", Pearson Education. 5. James F., "Neural Networks – Algorithms, Applications and Programming Techniques", Pearson Education.

MASTER OF COMPUTER APPLICATION (MCA)

MCA03:Software Project Management

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Identify project planning objectives, along with various cost/effort estimation models.	K ₃
CO 2	Organize & schedule project activities to compute critical path for risk analysis	K ₃
CO 3	Monitor and control project activities.	K ₄ , K ₅
CO 4	Formulate testing objectives and test plan to ensure good software quality under SEI-CMM	K ₆
CO 5	Configure changes and manage risks using project management tools.	K ₂ , K ₄
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Project Evaluation and Project Planning: Importance of Software Project Management – Activities – Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.	08
II	Project Life Cycle and Effort Estimation: Software process and Process Models – Choice of Process models – Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming– Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points – COCOMO II – a Parametric Productivity Model.	08
III	Activity Planning and Risk Management: Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Risk Planning –Risk Management – – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of Critical paths – Cost schedules.	08
IV	Project Management and Control: Framework for Management and control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change control Software Configuration Management – Managing contracts – Contract Management.	08
V	Staffing in Software Projects: Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham – Hackman job characteristic model – Stress – Health and Safety – Ethical and Professional concerns – Working in teams – Decision making – Organizational structures – Dispersed and Virtual teams – Communications genres – Communication plans – Leadership.	08

MASTER OF COMPUTER APPLICATION (MCA)

MCA04: Big Data		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO1	Demonstrate knowledge of Big Data Analytics concepts and its applications in business.	K ₁ , K ₂
CO2	Demonstrate functions and components of Map Reduce Framework and HDFS.	K ₁ , K ₃
CO3	Develop queries in NoSQL environment.	K ₄ , K ₅
CO4	Explain process of developing Map Reduce based distributed processing applications.	K ₃ , K ₄
CO5	Explain process of developing applications using HBASE, Hive, Pig etc.	K ₂ , K ₆
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction to Big Data: Types of digital data, history of Big Data innovation, introduction to Big Data platform, drivers for Big Data, Big Data architecture and characteristics, 5 Vs of Big Data, Big Data technology components, Big Data importance and applications, Big Data features – security, compliance, auditing and protection, Big Data privacy and ethics, Big Data Analytics, Challenges of conventional systems, intelligent data analysis, nature of data, analytic processes and tools, analysis vs reporting, modern data analytic tools.	08
II	Hadoop: History of Hadoop, Apache Hadoop, the Hadoop Distributed File System, components of Hadoop, data format, analyzing data with Hadoop, scaling out, Hadoop streaming, Hadoop pipes, Hadoop Echo System. Map-Reduce: Map-Reduce framework and basics, how Map Reduce works, developing a Map Reduce application, unit tests with MR unit, test data and local tests, anatomy of a Map Reduce job run, failures, job scheduling, shuffle and sort, task execution, Map Reduce types, input formats, output formats, Map Reduce features, Real-world Map Reduce	08
III	HDFS (Hadoop Distributed File System): Design of HDFS, HDFS concepts, benefits and challenges, file sizes, block sizes and block abstraction in HDFS, data replication, how does HDFS store, read, and write files, Java interfaces to HDFS, command line interface, Hadoop file system interfaces, data flow, data ingest with Flume and Scoop, Hadoop archives, Hadoop I/O: Compression, serialization, Avro and file-based data structures. Hadoop Environment: Setting up a Hadoop cluster, cluster specification, cluster setup and installation, Hadoop configuration, security in Hadoop, administering Hadoop, HDFS monitoring & maintenance, Hadoop benchmarks, Hadoop in the cloud	08

MASTER OF COMPUTER APPLICATION (MCA)

IV	<p>Hadoop Eco System and YARN: Hadoop ecosystem components, schedulers, fair and capacity, Hadoop 2.0 New Features – Name Node high availability, HDFS federation, MRv2, YARN, Running MRv1 in YARN.</p> <p>NoSQL Databases: Introduction to NoSQL MongoDB: Introduction, data types, creating, updating and deleting documents, querying, introduction to indexing, capped collections</p> <p>Spark: Installing spark, spark applications, jobs, stages and tasks, Resilient Distributed Databases, anatomy of a Spark job run, Spark on YARN</p> <p>SCALA: Introduction, classes and objects, basic types and operators, built-in control structures, functions and closures, inheritance.</p>	08
V	<p>Hadoop Eco System Frameworks: Applications on Big Data using Pig, Hive and HBase</p> <p>Pig : Introduction to PIG, Execution Modes of Pig, Comparison of Pig with Databases, Grunt, Pig Latin, User Defined Functions, Data Processing operators,</p> <p>Hive - Apache Hive architecture and installation, Hive shell, Hive services, Hive</p>	08
	<p>metastore, comparison with traditional databases, HiveQL, tables, querying data and user defined functions, sorting and aggregating, Map Reduce scripts, joins & subqueries.</p> <p>HBase – Hbase concepts, clients, example, Hbase vs RDBMS, advanced usage, schema design, advance indexing, Zookeeper – how it helps in monitoring a cluster, how to build applications with Zookeeper. IBM Big Data strategy, introduction to Infosphere, BigInsights and Big Sheets, introduction to Big SQL.</p>

MCA05: Introduction to Machine Learning

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Understanding about Machine Learning and their perspectives.	K ₃ , K ₆
CO 2	Understanding and Applying the concepts of Machine Learning Algorithms	K ₂ , K ₆
CO 3	Design and implement supervised and unsupervised machine learning algorithms for real-world applications	K ₄ , K ₅
CO 4	Appreciate the underlying mathematical relationships within and across Machine Learning algorithms.	K ₂ , K ₃
CO 5	Ability to solve real problems by implementing machine learning	K ₂ , K ₄
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Overview and Introduction to Machine Learning: Data Science, AI & ML , Introduction of Machine intelligence and its applications, Machine learning concepts, Components of a learning problem, supervised, unsupervised and reinforcement learning, inductive learning, deductive learning.	08
II	Foundations of Machine Learning: Hypothesis Space and Inductive Bias, feature selection. Classification, regression linear and polynomial, logistic regression, decision tree, random forest, naïve bayes, SVM.	08
III	Clustering and dimensionality Reduction: Adaptive hierarchical clustering, SVD PCA, K-means , association analysis, apriori, hidden Markov model.	08
IV	Reinforcement learning: Elements of Reinforcement Learning, Characteristics of reinforcement learning, various techniques used in reinforcement, Model-Based Learning, Temporal Difference Learning, Markov decision process, Deep Learning.	08
V	Learning with Neural Networks: Introduction to Artificial Neuron, Architectures, Learning Methods, Taxonomy of NN Systems, Single-Layer NN System, Applications. Back Propagation Network: Background, BackPropagation Learning, Back-Propagation Algorithm.	08
Suggested Readings:

ELECTIVE-2

MASTER OF COMPUTER APPLICATION (MCA)

MCA06:Web Technology		
Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Apply the knowledge of the internet and related internet concepts that are vital in understanding web application development and analyze the insights of internet programming to implement complete application over the web.	K3, K6
CO 2	Understand, analyze and apply the role of markup languages like HTML, DHTML, and XML in the workings of the web and web applications.	K2, K3
CO 3	Use web application development software tools i.e. XML, Apache Tomcat etc. and identifies the environments currently available on the market to design web sites	K ₂ , K ₃
CO 4	Understand, analyze and build dynamic web pages using client side programming JavaScript and also develop the web application using servlet and JSP.	K ₂ , K ₄ ,K ₆
CO 5	Understand the impact of web designing by database connectivity with JDBC in the current market place where everyone use to prefer electronic medium for shopping, commerce, fund transfer and even social life also.	K ₃ , K ₆
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction: Introduction and Web Development Strategies, History of Web and Internet, Protocols Governing Web, Writing Web Projects, Connecting to Internet, Introduction to Internet services and tools, Introduction to client-server computing. Core Java: Introduction, Operator, Data type, Variable, Arrays, Methods & Classes, Inheritance, Package and Interface, Exception Handling, Multithread programming, I/O, Java Applet, String handling, Event handling, Introduction to AWT, AWT controls, Layout managers	08
II	Web Page Designing: HTML: List, Table, Images, Frames, forms, CSS, Document type definition, XML: DTD, XML schemes, Object Models, presenting and using XML, Using XML Processors: DOM and SAX, Dynamic HTML	08
III	Scripting: Java script: Introduction, documents, forms, statements, functions, objects; introduction to AJAX, Networking : Internet Addressing, InetAddress, Factory Methods, Instance Methods, TCP/IP Client Sockets, URL, URL Connection, TCP/IP Server Sockets, Datagram	08
IV	Enterprise Java Bean: Preparing a Class to be a JavaBeans, Creating a JavaBeans, JavaBeans Properties, Types of beans, Stateful Session bean, Stateless Session bean, Entity bean Java Database Connectivity (JDBC): Merging Data from Multiple Tables: Joining, Manipulating, Databases with JDBC, Prepared Statements, Transaction Processing, Stored Procedures.	08
V	Servlets: Servlet Overview and Architecture, Interface Servlet and the Servlet Life Cycle, Handling HTTP get Requests, Handling HTTP post Requests, Redirecting Requests to Other Resources, Session Tracking, Cookies, Session Tracking with Http Session. Java Server Pages (JSP): Introduction, Java Server Pages Overview, A First Java Server Page Example, Implicit Objects, Scripting, Standard Actions, Directives, Custom Tag Libraries.	08

MASTER OF COMPUTER APPLICATION (MCA)

MASTER OF COMPUTER APPLICATION (MCA)

MCA07: Cloud Computing

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Understand the concepts of Cloud Computing, key technologies, strengths and limitations of cloud computing.	K ₁ , K ₂
CO 2	Develop the ability to understand and use the architecture to compute and storage cloud, service and models.	K ₁ , K ₂
CO 3	Understand the application in cloud computing.	K ₆
CO 4	Learn the key and enabling technologies that help in the development of cloud.	K ₂ , K ₅
CO 5	Explain the core issues of cloud computing such as resource management and security.	K ₂ , K ₅
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Cloud Computing – Definition of Cloud – Evolution of Cloud Computing – Underlying Principles of Parallel and Distributed, History of Cloud Computing - Cloud Architecture - Types of Clouds - Business models around Clouds – Major Players in Cloud Computing-issues in Clouds - Eucalyptus - Nimbus - Open Nebula, CloudSim.	08
II	Cloud Services: Types of Cloud services: Software as a Service Platform as a Service –Infrastructure as a Service - Database as a Service - Monitoring as a Service –Communication as services. Service providers- Google, Amazon, Microsoft Azure, IBM, Sales force.	08
III	Collaborating Using Cloud Services: Email Communication over the Cloud - CRM Management – Project Management-Event Management - Task Management – Calendar - Schedules - Word Processing – Presentation – Spreadsheet - Databases – Desktop - Social Networks and Groupware.	08
IV	Virtualization for Cloud: Need for Virtualization – Pros and cons of Virtualization – Types of Virtualization –System VM, Process VM, Virtual Machine monitor – Virtual machine properties - Interpretation and binary translation, HLL VM - supervisors – Xen, KVM, VMware, Virtual Box, Hyper-V.	08
V	Security, Standards and Applications: Security in Clouds: Cloud security challenges – Software as a Service Security, Common Standards: The Open Cloud Consortium – The Distributed management Task Force – Standards for application Developers – Standards for Messaging – Standards for Security, End user access to cloud computing, Mobile Internet devices and the cloud. Hadoop – MapReduce – Virtual Box — Google App Engine – Programming Environment for Google App Engine	08

MCA08:Simulation and Modelling

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to understand		
CO 1	Study the concept of system, its components and types.	K ₁
CO 2	Understand and analyze nature and techniques of major simulation models.	K ₂ , K ₄
CO 3	Study and analyze the idea of continuous and discrete system simulation.	K ₁ , K ₄
CO 4	Understand the notion of system dynamics and system dynamics diagrams.	K ₂
CO 5	Finding critical path computation and understanding PERT networks	K ₁ , K ₄
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	System definition and components, stochastic activities, continuous and discrete systems, System modeling, Types of models, static and dynamic physical models, static and dynamic mathematical models, full corporate model, types of system study.	08
II	System simulation, Need of simulation, Basic nature of simulation, techniques of simulation, comparison of simulation and analytical methods, types of system Simulation, real time simulation, hybrid simulation, simulation of pursuit problem, single-server queuing system and an inventory problem, Monte-Carlo simulation, Distributed Lag model, Cobweb model.	08
III	Simulation of continuous Systems, analog vs digital simulation, simulation of water reservoir system, simulation of a servo system, simulation of an auto-pilot. Discrete system simulation, fixed time step vs. event-to-event model, generation of random numbers, test of randomness, Monte-Carlo computation vs. stochastic simulation.	08
IV	System dynamics, exponential growth models, exponential decay models, logistic curves, system dynamics diagrams, world model.	08
V	Simulation of PERT networks, critical path computation, uncertainties in activity duration, resource allocation and consideration, Simulation languages, object oriented simulation	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Geoffrey Gordon, "System Simulation", PHI 2. Narsingh Deo, "System Simulation with digital computer", PHI. 3. Averill M. Law and W. David Kelton, "Simulation Modelling and Analysis", TMH.

MCA09: Soft Computing

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Recognize the need of soft computing and study basic concepts and techniques of soft computing.	K ₃
CO 2	Understand the basic concepts of artificial neural network to analyze widely used neural networks.	K ₁ , K ₄
CO 3	Apply fuzzy logic to handle uncertainty in various real-world problems.	K ₂ , K ₄
CO 4	Study various paradigms of evolutionary computing and evaluate genetic algorithm in solving optimization problems.	K ₁ , K ₂
CO 5	Apply hybrid techniques in applications of soft computing.	K ₃ , K ₄
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction to Soft Computing: Introduction, Comparison with hard computing, Concept of learning and adaptation, Constituents of soft computing, Applications of soft computing. Artificial Neural Networks: Basic concepts of neural networks, Human brain, Biological neural network, History of artificial neural networks, Basic building blocks of an artificial neuron, Neural network architectures, Activation functions, Characteristics and limitation of neural networks.	08
II	Artificial Neural Networks: Learning methods - Supervised, Unsupervised, Reinforcement, Hebbian, Gradient descent, Competitive, Stochastic. Major classes of neural networks: Perceptron networks, Multilayer perceptron model, Back-propagation network, Radial basis function network, Recurrent neural network, Hopfield networks, Kohonen self-organizing feature maps.	08
III	Fuzzy Logic: Introduction to Fuzzy Logic, Comparison with crisp logic, Properties of classical sets, Operations on classical sets, Properties of fuzzy sets, Operations on fuzzy sets, Classical relations, Fuzzy relations, Features and types of fuzzy membership functions, Fuzzy arithmetic, Fuzzy measures. Fuzzy Systems: Crisp logic, Predicate logic, Fuzzy logic, Fuzzy propositions, Inference rules, Fuzzy inference systems- Fuzzification, Inference, Defuzzification, Types of inference engines.	08
V	Evolutionary Computing: Introduction, Evolutionary algorithm, Biological evolutionary process, Paradigms of evolutionary computing – Genetic algorithm and Genetic programming, Evolutionary strategies, Evolutionary programming. Genetic Algorithm: Introduction, Traditional optimization and search techniques, Comparison with traditional algorithms, Operations- Encoding, Selection, Crossover and Mutation, Classification of Genetic algorithm.	08

MASTER OF COMPUTER APPLICATION (MCA)

V	<p>Hybrid Soft Computing Techniques: Introduction, Classification of hybrid systems, Neuro-fuzzy hybrid systems, Neuro-genetic hybrid systems, Fuzzygenetic hybrid systems.</p> <p>Other Soft Computing Techniques: Tabu Search, Ant colony based optimization, Swarm Intelligence.</p>	08

MCA10: Android Operating System

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Understand the basic concepts and functions of Mobile Application and Android Studio.	K ₁ , K ₂
CO 2	Describe the working and architecture of Android Operating System.	K ₂ , K ₃
CO 3	Design Android UI Layout and Describe activities.	K ₂ , K ₃
CO 4	Design and develop an application using Database.	K ₃ , K ₄
CO 5	Ability to debug the Performance and Security of Android Applications.	K ₂ , K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Android Architecture: Introduction to Android, Layouts, Views and Resources, Activities and Intents, Activity Lifecycle and Saving State, Activities and Implicit Intents, Testing & Debugging App , Android Support Libraries.	08
II	User Interaction and Intuitive Navigation: Input Controls, Menus, Widgets, Screen Navigation, RecyclerView, ListView, Adapters and Data Binding, Drawables, Themes and Styles.	08
III	Background Tasks: Async Task and AsyncTask Loader, Broadcast receivers, Services, Notifications, Alarm managers, Date transferring, Internet access.	08
IV	Storing, Sharing and Retrieving Data in Android Applications: Overview to storing data, Shared preferences, App settings, Store and query data in Android's SQLite database. Content Providers , Content Resolver, Loading data using loaders.	08
V	Permissions, Performance and Security: Firebase and AdMob, Publish your app, Packaging and deployment, Interaction with server side applications- Using Google Maps, GPS and Wi-Fi, HTML and XML Parsing.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Meier R., "Professional Android 2 Application Development", Wiley. 2. Hashimi S., Komatineni S. and MacLean D., "Pro Android 2", Apress. 3. MASTER OF COMPUTER APPLICATION (MCA)

MCA 31P: Artificial Intelligence Lab

Course Outcome (CO)	Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand		
CO 1	Study and understand LISP and Prolog	K ₁ ,K ₂
CO 2	Apply Prolog statements to solve simple mathematical problems.	K ₃ , K ₄
CO 3	Apply LISP / Prolog statements to analyze and solve common AI problems.	K ₆
CO 4	Implement and compare various AI searching algorithms.	K ₆
CO 5	Design and implement programs for machine learning problems.	K ₆

DETAILED SYLLABUS

1. Study of Prolog and LISP.
2. Write simple fact for the statements using PROLOG.
3. Write predicates for simple problems such as conversion of temperature from Fahrenheit to centigrade or vice-versa, calculating area of rectangle, square and circle, etc.
4. Write program to solve the Monkey Banana problem.
5. Write program in Prolog for medical diagnosis.
6. Write program to solve mathematical problem such as calculate factorial, generate Fibonacci series, etc.
7. Write program to solve 4-Queen / 8-Queen problem.
8. Write program to solve traveling salesman problem.
9. Write program to solve water jug problem.
10. Write program to solve tic-tac-toe problem.
11. Write program to implement uninformed searching algorithms.
12. Write program to implement informed searching algorithms.

Note: The Instructor may add/delete/modify/tune experiments, wherever he/she feels in a justified manner.

MASTER OF COMPUTER APPLICATION (MCA)

MCA 32P: Software Engineering Lab		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Identify ambiguities, inconsistencies and incompleteness from a requirements specification and state functional and non-functional requirement.	K ₂ , K ₄
CO 2	Identify different actors and use cases from a given problem statement and draw use case diagram to associate use cases with different types of relationship.	K ₃ , K ₅
CO 3	Draw a class diagram after identifying classes and association among them.	K ₄ , K ₅
CO 4	Graphically represent various UML diagrams and associations among them and identify the logical sequence of activities undergoing in a system, and represent them pictorially.	K ₄ , K ₅
CO 5	Able to use modern engineering tools for specification, design, implementation and testing.	K ₃ , K ₄
DETAILED SYLLABUS		
For any given case/ problem statement do the following; <ol style="list-style-type: none">1. Prepare a SRS document in line with the IEEE recommended standards.2. Draw the use case diagram and specify the role of each of the actors.3. Prepare state the precondition, post condition and function of each use case.4. Draw the activity diagram.5. Identify the classes. Classify them as weak and strong classes and draw the class diagram.6. Draw the sequence diagram for any two scenarios.7. Draw the collaboration diagram.8. Draw the state chart diagram.9. Draw the component diagram.10. Draw the deployment diagram.		
Note: The Instructor may add/delete/modify/tune experiments, wherever he/she feels in a justified manner. Draw the deployment diagram		

**SECOND YEAR SYLLABUS
SEMESTER-IV**

ELECTIVE-3

MASTER OF COMPUTER APPLICATION (MCA)

MCA41: Blockchain Architecture		
	Course Outcome (CO)	Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO1	Study and understand basic concepts of blockchain architecture.	K2
CO2	Analyze various requirements for consensus protocols.	K2
CO3	Apply and evaluate the consensus process.	K3
CO4	Understand the concepts of Hyperledger fabric.	K3
CO5	Analyze and evaluate various use cases in financial software and supply chain.	K3
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Introduction to Blockchain: Digital Money to Distributed Ledgers, Design Primitives: Protocols, Security, Consensus, Permissions, Privacy. Blockchain Architecture and Design: Basic crypto primitives: Hash, Signature, Hashchain to Blockchain, Bitcoin Basic, Basic consensus mechanisms.	08
II	Consensus: Requirements for the consensus protocols, Proof of Work (PoW), Scalability aspects of Blockchain consensus protocols, distributed consensus, consensus in Bitcoin. Permissioned Blockchains: Design goals, Consensus protocols for Permissioned Blockchains	08
III	Hyperledger Fabric: Decomposing the consensus process, Hyperledger fabric components. Chaincode Design and Implementation Hyperledger Fabric: Beyond Chaincode: fabric SDK and Front End, Hyperledger composer tool.	08
IV	Use case 1: Blockchain in Financial Software and Systems (FSS): (i) Settlements, (ii) KYC, (iii) Capital markets, (iv) Insurance. Use case 2: Blockchain in trade/supply chain: (i) Provenance of goods, visibility, trade/supply chain finance, invoice management discounting, etc.	08
V	Use case 3: Blockchain for Government: (i) Digital identity, land records and other kinds of record keeping between government entities, (ii) public distribution system social welfare systems, Blockchain Cryptography, Privacy and Security on Blockchain	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Andreas Antonopoulos, "Mastering Bitcoin: Unlocking Digital Cryptocurrencies", O'Reilly 2. Melanie Swa, "Blockchain", O'Reilly 3. "Hyperledger Fabric", https://www.hyperledger.org/projects/fabric 4. Bob Dill, David Smits, "Zero to Blockchain - An IBM Redbooks course", https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/crse0401.html

MCA 42: Data Warehousing & Data Mining

Course Outcome (CO)			Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand			
CO1	Demonstrate knowledge of Data Warehouse and its components.		K ₁ , K ₂
CO2	Discuss the process of Warehouse Planning and Implementation.		K ₂ , K ₄
CO3	Discuss and implement various supervised and Non supervised learning algorithms on data.		K ₃
CO4	Explain the various process of Data Mining and decide best according to type of data.		K ₁ , K ₅
CO5	Explain process of knowledge discovery in database (KDD). Design Data Mining model.		K ₃
DETAILED SYLLABUS			3-0-0
Unit	Topic	Proposed Lecture	
I	Data Warehousing: Overview, Definition, Data Warehousing Components, Building a Data Warehouse, Warehouse Database, Mapping the Data Warehouse to a Multiprocessor Architecture, Difference between Database System and Data Warehouse, Multi Dimensional Data Model, Data Cubes, Stars, Snow Flakes, Fact Constellations, Concept.	08	
II	Data Warehouse Process and Technology: Warehousing Strategy, Warehouse /management and Support Processes, Warehouse Planning and Implementation, Hardware and Operating Systems for Data Warehousing, Client/Server Computing Model & Data Warehousing. Parallel Processors & Cluster Systems, Distributed DBMS implementations, Warehousing Software, Warehouse Schema Design	08	
III	Data Mining: Overview, Motivation, Definition & Functionalities, Data Processing, Form of Data Pre-processing, Data Cleaning: Missing Values, Noisy Data, (Binning, Clustering, Regression, Computer and Human inspection), Inconsistent Data, Data Integration and Transformation. Data Reduction:-Data Cube Aggregation, Dimensionality reduction, Data Compression, Numerosity Reduction, Discretization and Concept hierarchy generation, Decision Tree	08	
IV	Classification: Definition, Data Generalization, Analytical Characterization, Analysis of attribute relevance, Mining Class comparisons, Statistical measures in large Databases, Statistical-Based Algorithms, Distance-Based Algorithms, Decision Tree-Based Algorithms. Clustering: Introduction, Similarity and Distance Measures, Hierarchical and Partitional Algorithms. Hierarchical Clustering- CURE and Chameleon. Density Based Methods DBSCAN, OPTICS. Grid Based Methods- STING, CLIQUE. Model Based Method – Statistical Approach, Association rules: Introduction, Large Item sets, Basic Algorithms, Parallel and Distributed Algorithms, Neural Network approach.	08	

MASTER OF COMPUTER APPLICATION (MCA)

V	Data Visualization and Overall Perspective: Aggregation, Historical information, Query Facility, OLAP function and Tools. OLAP Servers, ROLAP, MOLAP, HOLAP, Data Mining interface, Security, Backup and Recovery, Tuning Data Warehouse, Testing Data Warehouse. Warehousing applications and Recent Trends: Types of Warehousing	08
	Applications, Web Mining, Spatial Mining and Temporal Mining.	

Suggested Readings:

1. Alex Berson, Stephen J. Smith “Data Warehousing, Data-Mining & OLAP”, TMH.
2. Mark Humphries, Michael W. Hawkins, Michelle C. Dy, “Data Warehousing: Architecture and Implementation”, Pearson.
3. I. Singh, “Data Mining and Warehousing”, Khanna Publishing House.
4. Margaret H. Dunham, S. Sridhar, ”Data Mining: Introductory and Advanced Topics” Pearson Education
5. Arun K. Pujari, “Data Mining Techniques” Universities Press.
6. Pieter Adriaans, Dolf Zantinge, “Data-Mining”, Pearson Education

MCA43: Pattern Recognition

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Study of basics of Pattern recognition. Understand the designing principles and Mathematical foundation used in pattern recognition.	K ₁ , K ₂
CO 2	Analysis the Statistical Patten Recognition.	K ₃ , K ₄
CO 3	Understanding the different Parameter estimation methods.	K ₁ , K ₂
CO 4	Understanding the different Nonparametric Techniques.	K ₁ , K ₂ ,
CO 5	Understand and Make use of unsupervised learning and Clustering in Pattern recognition.	K ₂ K ₃ , K ₄
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Introduction: Basics of pattern recognition, Design principles of pattern recognition system, Learning and adaptation, Pattern recognition approaches, Mathematical foundations – Linear algebra, Probability Theory, Expectation, mean and covariance, Normal distribution, multivariate normal densities, Chi squared test.	08
II	Statistical Patten Recognition: Bayesian Decision Theory, Classifiers, Normal density and discriminant functions	08
III	Parameter estimation methods: Maximum-Likelihood estimation, Bayesian Parameter estimation, Dimension reduction methods - Principal Component Analysis (PCA), Fisher Linear discriminant analysis, Expectationmaximization (EM), Hidden Markov Models (HMM), Gaussian mixture models.	08
IV	Nonparametric Techniques: Density Estimation, Parzen Windows, KNearest Neighbor Estimation, Nearest Neighbor Rule, Fuzzy classification.	08
V	Unsupervised Learning & Clustering: Criterion functions for clustering, Clustering Techniques: Iterative square - error partitional clustering – K means, agglomerative hierarchical clustering, Cluster validation.	08
Suggested Readings:		
1. Duda R. O., Hart P. E. and Stork D. G., "Pattern Classification", John Wiley. 2. Bishop C. M., "Neural Network for Pattern Recognition", Oxford University Press. 3. Singhal R., "Pattern Recognition: Technologies & Applications", Oxford University Press. 4. Theodoridis S. and Koutroumbas K., "Pattern Recognition", Academic Press.

MASTER OF COMPUTER APPLICATION (MCA)

MCA44: Data Analytics

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO1	Describe the life cycle phases of Data Analytics through discovery, planning and building.	K ₁ , K ₂
CO2	Understand and apply Data Analysis Techniques.	K ₂ , K ₃
CO3	Implement various Data streams.	K ₃
CO4	Understand item sets, Clustering, frame works & Visualizations.	K ₂
CO5	Apply R tool for developing and evaluating real time applications.	K ₃ , K ₅ , K ₆
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	<p>Introduction to Data Analytics: Sources and nature of data, classification of data (structured, semi-structured, unstructured), characteristics of data, introduction to Big Data platform, need of data analytics, evolution of analytic scalability, analytic process and tools, analysis vs reporting, modern data analytic tools, applications of data analytics.</p> <p>Data Analytics Lifecycle: Need, key roles for successful analytic projects, various phases of data analytics lifecycle – discovery, data preparation, model planning, model building, communicating results, operationalization</p>	08
II	<p>Data Analysis: Regression modeling, multivariate analysis, Bayesian modeling, inference and Bayesian networks, support vector and kernel methods, analysis of time series: linear systems analysis & nonlinear dynamics, rule induction, Neural Networks: Learning and generalisation, competitive learning, principal component analysis and neural networks, fuzzy logic: extracting fuzzy models from data, fuzzy decision trees, stochastic search methods.</p>	08
III	<p>Mining Data Streams: Introduction to streams concepts, stream data model and architecture, stream computing, sampling data in a stream, filtering streams, counting distinct elements in a stream, estimating moments, counting oneness in a window, decaying window, Real-time Analytics Platform (RTAP) applications, Case studies – Real time sentiment analysis, stock market predictions.</p>	08
IV	<p>Frequent Itemsets and Clustering: Mining frequent itemsets, market based modelling, Apriori algorithm, handling large data sets in main memory, limited pass algorithm, counting frequent itemsets in a stream, Clustering techniques: hierarchical, K-means, clustering high dimensional data, CLIQUE and ProCLUS, frequent pattern based clustering methods, clustering in non-euclidean space, clustering for streams and parallelism.</p>	08
V	<p>Frame Works and Visualization: MapReduce, Hadoop, Pig, Hive, HBase, MapR, Sharding, NoSQL Databases, S3, Hadoop Distributed File Systems, Visualization: visual data analysis techniques, interaction techniques, systems and applications.</p> <p>Introduction to R - R graphical user interfaces, data import and export, attribute and data types, descriptive statistics, exploratory data analysis, visualization before analysis, analytics for unstructured data.</p>	08

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Explain basic concepts, OSI reference model, services and role of each layer of OSI model and TCP/IP, networks devices and transmission media, Analog and digital data transmission.	K2
CO 2	Apply channel allocation, framing, error and flow control techniques.	K3
CO 3	Describe the functions of Network Layer i.e. Logical addressing, subnetting & Routing Mechanism.	K4
CO 4	Explain the different Transport Layer function i.e. Port addressing, Connection Management Error control and Flow control mechanism.	K2
CO 5	Explain the functions offered by session and presentation layer and their Implementation.	K3
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	<p>Introductory Concepts: Goals and applications of networks, Categories of networks, Organization of the Internet, ISP, Network structure and architecture (layering principles, services, protocols and standards), The OSI reference model, TCP/IP protocol suite, Network devices and components.</p> <p>Physical Layer: Network topology design, Types of connections, Transmission media, Signal transmission and encoding, Network performance and transmission impairments, Switching techniques and multiplexing.</p>	08
II	<p>Link layer: Framing, Error Detection and Correction, Flow control (Elementary Data Link Protocols, Sliding Window protocols).</p> <p>Medium Access Control and Local Area Networks: Channel allocation, Multiple access protocols, LAN standards, Link layer switches & bridges (Learning bridge and Spanning tree algorithms).</p>	08
III	<p>Network Layer: Point-to-point networks, Logical addressing, Basic internetworking (IP, CIDR, ARP, RARP, DHCP, and ICMP), Routing, forwarding and delivery, Static and dynamic routing, Routing algorithms and protocols, Congestion control algorithms, IPv6.</p>	08
IV	<p>Transport Layer: Process-to-process delivery, Transport layer protocols (UDP and TCP), Multiplexing, Connection management, Flow control and retransmission, Window management, TCP Congestion control, Quality of service.</p>	08
V	<p>Application Layer: Domain Name System, World Wide Web and Hyper Text Transfer Protocol, Electronic mail, File Transfer Protocol, Remote login, Network management, Data compression, Cryptography – basic concepts..</p>	08
<p>Suggested Readings:</p> <ol style="list-style-type: none"> 1. Behrouz Forouzan, "Data Communication and Networking", McGraw Hill 2. Andrew Tanenbaum "Computer Networks", Prentice Hall. 3. MASTER OF COMPUTER APPLICATION (MCA)

MCA46: Digital Image Processing		
Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Explain the basic concepts of two-dimensional signal acquisition, sampling, quantization and color model.	K ₁ , K ₂
CO 2	Apply image processing techniques for image enhancement in both the spatial and frequency domains.	K ₄
CO 3	Apply and compare image restoration techniques in both spatial and frequency domain.	K ₃ , K ₅
CO 4	Compare edge based and region based segmentation algorithms for ROI extraction.	K ₁
CO 5	Explain compression techniques and descriptors for image processing.	K ₄ , K ₅
DETAILED SYLLABUS		4-0-0
Unit	Topic	Proposed Lecture
I	Digital Image Fundamentals: Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels – Color image fundamentals – RGB, HSI models, Two-dimensional mathematical preliminaries, 2D transforms – DFT, DCT.	08
II	Image Enhancement: Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering–Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters, Homomorphic filtering, Color image enhancement.	08
III	Image Restoration: Image Restoration – degradation model, Properties, Noise models – Mean Filters – Order Statistics –Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering	08
IV	Image Segmentation: Edge detection, Edge linking via Hough transform – Thresholding – Region based segmentation – Region growing – Region splitting and merging – Morphological processing- erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.	08
V	Image Compression and Recognition: Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, Regional Descriptors – Topological feature, Texture – Patterns and Pattern classes – Recognition based on matching.	08

MCA47: Software Testing & Quality Assurance

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Test the software by applying testing techniques to deliver a product free from bugs.	K ₁ , K ₂
CO 2	Investigate the scenario and select the proper testing technique.	K ₂ , K ₃
CO 3	Explore the test automation concepts and tools and estimation of cost, schedule based on standard metrics.	K ₂ K ₃ , K ₄
CO 4	Understand how to detect, classify, prevent and remove defects.	K ₁ , K ₂
CO 5	Choose appropriate quality assurance models and develop quality. Ability to conduct formal inspections, record and evaluate results of inspections.	K ₁ , K ₂ K ₃
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
I	Software Testing Basics: Testing as an engineering activity, Role of process in software quality, Testing as a process, Basic definitions, Software testing principles, The tester's role in a software development organization, Origins of defects, Defect classes, The defect repository and test design, Defect examples, Developer / Tester support for developing a defect repository.	08
II	Testing Techniques and Levels of Testing: Using White Box Approach to Test design– Static Testing Vs. Structural Testing, Code Functional Testing, Coverage and Control Flow Graphs, Using Black Box Approaches to Test Case Design, Random Testing, Requirements based testing, Decision tables, State-based testing, Cause-effect graphing, Error guessing, Compatibility testing, Levels of Testing -Unit Testing, Integration Testing, Defect Bash Elimination. System Testing - Usability and Accessibility Testing, Configuration Testing, Compatibility Testing.	08
III	Software Test Automation And Quality Metrics: Software Test Automation, Skills needed for Automation, Scope of Automation, Design and Architecture for Automation, Requirements for a Test Tool, Challenges in Automation Tracking the Bug, Debugging. Testing Software System Security - Six-Sigma, TQM - Complexity Metrics and Models, Quality Management Metrics, Availability Metrics, Defect Removal Effectiveness, FMEA, Quality Function Deployment, Taguchi Quality Loss Function, Cost of Quality.	08

MASTER OF COMPUTER APPLICATION (MCA)

IV	Fundamentals of Software Quality Assurance: SQA basics, Components of the Software Quality Assurance System, software quality in business context, planning for software quality assurance, product quality and process quality, software process models, 7 QC Tools and Modern Tools.	08
V	Software Assurance Models: Models for Quality Assurance, ISO-9000 series, CMM, CMMI, Test Maturity Models, SPICE, Malcolm Baldrige Model-PCMM. Software Quality Assurance Trends: Software Process- PSP and TSP, OO Methodology, Clean room software engineering, Defect Injection and prevention, Internal Auditing and Assessments, Inspections & Walkthroughs, Case Tools and their affect on Software Quality.	08

Suggested Readings:

1. Srinivasan Desikan, Gopaldaswamy Ramesh, “Software Testing: Principles and Practices”, Pearson.
2. Daniel Galin, “Software Quality Assurance: From Theory to Implementation”, Pearson Addison Wesley.
3. Aditya P. Mathur, “Foundations of Software Testing”, Pearson.
4. Paul Ammann, Jeff Offutt, “Introduction to Software Testing”, Cambridge University Press.
5. Paul C. Jorgensen, “Software Testing: A Craftsman's Approach”, Auerbach Publications.
6. William Perry, “Effective Methods of Software Testing”, Wiley Publishing, Third Edition.
7. Renu Rajani, Pradeep Oak, “Software Testing – Effective Methods, Tools and Techniques”, Tata McGraw Hill.
8. Stephen Kan, “Metrics and Models in Software Quality”, Addison – Wesley, Second Edition.
9. S. A. Kelkar, “Software quality and Testing”, PHI Learning Pvt, Ltd.
10. Watts S Humphrey, “Managing the Software Process”, Pearson Education Inc.

MCA 48: Internet of Things

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Explain the architecture of Internet of Things.	K1,K2
CO 2	Demonstrate the different technologies for IoTs.	K2
CO 3	Apply Python Programming skills to develop IoT application.	K4
CO 4	Analyze the architecture of Arduino and Raspberry Pi.	K3
CO 5	Create Small IoT Applications using Sensors.	K ₂ , K ₃
DETAILED SYLLABUS		3-1-0
Unit	Topic	Proposed Lecture
I	Getting Familiar with internet of Things (IoT): Definition, Characteristics, History and Evolution of IoT. Physical Design of IoT: Things in IoT, IoT Protocols. Logical Design of IoT: Functional block, Communication Models and APIs, IoT Stack	08
II	Enabling Technologies: Sensors, Cloud Computing, Big Data analytics, Embedded Computing Boards, Communication Protocols, IoT Challenges, IoT Levels, Overview of Domain Specific IoTs applications Like Smart Cities, Smart Agriculture and industrial IoT Applications. The IoT Paradigm: Comparison with User interface related Technologies like SCADA, M2M, SDN. IoT Design Methodology: IoT Components.	08
III	Transport Protocols: BLE, LiFi, Network Protocol: 6LoWPAN. Physical Design of IoT: Functional Block, Cloud Storage Models, Communication Models, and Communication APIs: REST based, Web SocketBased, Cloud for IoT: Challenges, Fog Computing.	08
IV	Physical Devices and Endpoints: Arduino Pin diagram, Arduino Architecture, Arduino Programming, Raspberry Pi Pin diagram, Raspberry Pi Architecture. Sensors and Interfacing: Types of Sensors. Integrating Sensors: HDT(Humidity and Temperature Sensor), Gas Detector, HC-05 (Bluetooth Module), Ultrasonic Sensor, ESP8266 (Wi-Fi Module).	08
V	Logical Design of IoT: Revisiting Python Programming for IoT (Data types, Operators, Control Structures, List, Tuples, Dictionaries, Functions, Modules and File Handling). Python Packages for connecting IoT Devices: Bluetooth, Sockets, Time, Requests, Sys, Adafruit Python DHT, paho-mqtt, Python JSON, Python pip.	08

MASTER OF COMPUTER APPLICATION (MCA)

MASTER OF COMPUTER APPLICATION (MCA)**MCA49: Modern Application Development**

Course Outcome (CO)		Bloom's Knowledge Level (KL)
At the end of course, the student will be able to understand		
CO 1	Equip students with principles, knowledge and skills for the design and construction of web-enabled internet applications.	K2
CO 2	Design, implement and deploy an inhouse project using MongoDB, Express.js, AnjularJS, Node.js.	K3
CO 3	Get acquainted with the latest web application development trends in the IT industry.	K6
CO 4	Evaluate different web application development alternatives and choose the appropriate one for a specific scenario.	K6
DETAILED SYLLABUS		K5
Unit	Topic	3-1-0
I	Basics of HTML, CSS, and Javascript HTML, CSS, Bootstrap, Javascript basics – Variables, functions, and scopes, Logic flow and loops, Events and Document object model, Handling JSON data, Understanding JSON callbacks.	08
II	Introduction to Node JS Installation, Callbacks, Installing dependencies with npm, Concurrency and event loop fundamentals, Node JS callbacks, Building HTTP server, Importing and exporting modules, Building chat application using web socket.	08
III	Building REST services using Node JS REST services, Installing Express JS, Express Node project structure, Building REST services with Express framework, Routes, filters, template engines - Jade, ejs.	08
IV	MongoDB Basics and Communication with Node JS Installation, CRUD operations, Sorting, Projection, Aggregation framework, MongoDB indexes, Connecting to MongoDB with Node JS, Introduction to Mongoose, Connecting to MongoDB using mongoose, Defining mongoose schemas, CRUD operations using mongoose.	08
V	Building Single Page Applications with AngularJS Single Page Application – Introduction, Two-way data binding(Dependency Injection), MVC in Angular JS, Controllers, Getting user input, Loops, Client side routing – Accessing URL data, Various ways to provide data in Angular JS – Services and Factories, Working with filters, Directives and Cookies.	08
Suggested Readings:		
<ol style="list-style-type: none"> 1. Simon Holmes , “Getting MEAN with Mongo, Express, Angular, and Node”, Second Edition, Manning Publications; 1 edition (31 October 2015). 2. Ken Williamson, “Learning Angular JS”, O’Reilly; 1 edition (24 March 2015). 3. MithunSatheesh, “Web development with MongoDB and Node JS”, Packt Publishing Limited; 2nd Revised edition (30 October 2015).

MCA50:Distributed Database Systems		
Course Outcome (CO)		
At the end of course, the student will be able to understand		
CO 1	Aware of fundamentals of transactions and schedules.	
CO 2	Familiar with locking protocols.	
CO 3	Set the rules over management of transaction and concurrency control.	
CO 4	Enhance the knowledge about issues of recovery and atomicity in distributed databases.	
CO 5	Use the different techniques of distributed query processing.	
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Transaction and schedules, Concurrent Execution of transaction, Conflict and View Serializability, Testing for Serializability, Concepts in Recoverable and Cascade less schedules.	08
II	Lock based protocols, time stamp-based protocols, Multiple Granularity and Multi version Techniques, enforcing serializability by Locks, Locking system with multiple lock modes, architecture for Locking scheduler	08
III	Distributed Transactions Management, Data Distribution, Fragmentation and Replication Techniques, Distributed Commit, Distributed Locking schemes, Long duration transactions, Moss Concurrency protocol.	08
IV	Issues of Recovery and atomicity in Distributed Databases, Traditional recovery techniques, Log based recovery, Recovery with Concurrent Transactions, Recovery in Message passing systems, Checkpoints, Algorithms for recovery line, Concepts in Orphan and Inconsistent Messages.	08
V	Distributed Query Processing, Multiday Joins, Semi joins, Cost based query optimization for distributed database, Updating replicated data, protocols for Distributed Deadlock Detection, Eager and Lazy Replication Techniques.	08
Suggested Readings:

MCA51: Mobile Computing		
Course Outcome (CO)		
At the end of course, the student will be able to understand		
CO 1	Study and aware fundamentals of mobile computing.	
CO 2	Study and analyze wireless networking protocols, applications and environment.	
CO 3	Understand various data management issues in mobile computing.	
CO 4	Analyze different type of security issues in mobile computing environment.	
CO 5	Study, analyze, and evaluate various routing protocols used in mobile computing.	
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction, Issues in mobile computing, Overview of wireless telephony, Cellular concept, GSM- air interface, channel structure; Location management- HLR-VLR, hierarchical, handoffs; Channel allocation in cellular systems, CDMA, GPRS, MAC for cellular system.	08
II	Wireless Networking, Wireless LAN Overview- MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, TCP over wireless, Wireless applications, Data broadcasting, Mobile IP, WAParchitecture, protocol stack, application environment, applications.	08
III	Data management issues in mobile computing, data replication for mobile computers, adaptive clustering for mobile wireless networks, File system, Disconnected operations.	08
IV	Mobile Agents computing, Security and fault tolerance, Transaction processing in mobile computing environment.	08
V	Adhoc networks, Localization, MAC issues, Routing protocols, Global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Adhoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS in Adhoc Networks, applications	08

MASTER OF COMPUTER APPLICATION (MCA)

MCA 52: Computer Graphics and Animation

Course Outcome (CO)		
At the end of course, the student will be able to understand		
CO 1	Understand the graphics hardware used in field of computer graphics.	
CO 2	Understand the concept of graphics primitives such as lines and circle based on different algorithms.	
CO 3	Apply the 2D graphics transformations, composite transformation and Clipping concepts.	
CO 4	Apply the concepts and techniques used in 3D computer graphics, including viewing transformations, projections, curve and hidden surfaces.	
CO 5	Perform the concept of multimedia and animation in real life.	
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction and Line Generation: Types of computer graphics, Graphic Displays- Random scan displays, Raster scan displays, Frame buffer and video controller, Points and lines, Line drawing algorithms, Circle generating algorithms, Mid-point circle generating algorithm, and parallel version of these algorithms.	08
II	Transformations: Basic transformation, Matrix representations and homogenous coordinates, Composite transformations, Reflections and shearing. Windowing and Clipping: Viewing pipeline, Viewing transformations, 2-D Clipping algorithms- Line clipping algorithms such as Cohen Sutherland line clipping algorithm, Liang Barsky algorithm, Line clipping against non rectangular clip windows; Polygon clipping – Sutherland Hodgeman polygon clipping, Weiler and Atherton polygon clipping, Curve clipping, Text clipping.	08
III	Three Dimensional: 3-D Geometric Primitives, 3-D Object representation, 3D Transformation, 3-D viewing, projections, 3-D Clipping. Curves and Surfaces: Quadric surfaces, Spheres, Ellipsoid, Blobby objects, Introductory concepts of Spline, Bspline and Bezier curves and surfaces.	08
IV	Hidden Lines and Surfaces: Back Face Detection algorithm, Depth buffer method, A- buffer method, Scan line method, basic illumination models– Ambient light, Diffuse reflection, Specular reflection and Phong model, Combined approach, Warn model, Intensity Attenuation, Color consideration, Transparency and Shadows.	08
V	Multimedia Systems: Design Fundamentals, Back ground of Art, Color theory overview, Sketching & illustration, Storyboarding, different tools for animation. Animation: Principles of Animations, Elements of animation and their use, Power of Motion, Animation Techniques, Animation File Format, Making animation for Rolling Ball, making animation for a Bouncing Ball, Animation for the web, GIF, Plugins and Players, Animation tools for World Wide Web.	08

MCA 53: Natural Language Processing

Course Outcome (CO)		
At the end of course, the student will be able to understand		
CO 1	Study and understand basic concepts, background and representations of natural language.	
CO 2	Analyze various real-world applications of NLP.	
CO 3	Apply different parsing techniques in NLP.	
CO 4	Understand grammatical concepts and apply them in NLP.	
CO 5	Apply various statistical and probabilistic grammar methods to handle and evaluate ambiguity.	
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction to Natural Language Understanding: The study of Language, Applications of NLP, Evaluating Language Understanding Systems, Different levels of Language Analysis, Representations and Understanding, Organization of Natural language Understanding Systems, Linguistic Background: An outline of English syntax.	08
II	Introduction to semantics and knowledge representation, some applications like machine translation, database interface.	08
III	Grammars and Parsing: Grammars and sentence Structure, Top-Down and Bottom-Up Parsers, Transition Network Grammars, Top- Down Chart Parsing. Feature Systems and Augmented Grammars: Basic Feature system for English, Morphological Analysis and the Lexicon, Parsing with Features, Augmented Transition Networks.	08
IV	Grammars for Natural Language: Auxiliary Verbs and Verb Phrases, Movement Phenomenon in Language, Handling questions in Context-Free Grammars. Human preferences in Parsing, Encoding uncertainty, Deterministic Parser.	08
V	Ambiguity Resolution: Statistical Methods, Probabilistic Language Processing, Estimating Probabilities, Part-of Speech tagging, Obtaining Lexical Probabilities, Probabilistic Context-Free Grammars, Best First Parsing. Semantics and Logical Form, Word senses and Ambiguity, Encoding Ambiguity in Logical Form.	08
Suggested Readings:

MASTER OF COMPUTER APPLICATION (MCA)

MCA 54: Compiler Design

Course Outcome (CO)		
At the end of course, the student will be able to understand		
CO 1	Acquire knowledge of different phases and passes of the compiler and also able to use the compiler tools like LEX, YACC, etc.	
CO 2	Understand the parser and its types i.e. Top-Down and Bottom-up parsers and construction of LL, SLR, CLR, and LALR parsing table.	
CO 3	Implement the compiler using syntax-directed translation method and get knowledge about the synthesized and inherited attributes.	
CO 4	Acquire knowledge about run time data structure like symbol table organization and different techniques used in that.	
CO 5	Understand the target machine's run time environment, its instruction set for code generation and techniques used for code optimization.	
DETAILED SYLLABUS		
Unit	Topic	Proposed Lecture
I	Introduction to Compiler: Phases and passes, Bootstrapping, Finite state machines and regular expressions and their applications to lexical analysis, Optimization of DFA-Based Pattern Matchers implementation of lexical analyzers, lexical-analyzer generator, LEX compiler, Formal grammars and their application to syntax analysis, BNF notation, ambiguity, YACC. The syntactic specification of programming languages: Context free grammars, derivation and parse trees, capabilities of CFG.	08
II	Basic Parsing Techniques: Parsers, Shift reduce parsing, operator precedence parsing, top down parsing, predictive parsers Automatic Construction of efficient Parsers: LR parsers, the canonical Collection of LR(0) items, constructing SLR parsing tables, constructing Canonical LR parsing tables, Constructing LALR parsing tables, using ambiguous grammars, an automatic parser generator, implementation of LR parsing tables.	08
III	Syntax-directed Translation: Syntax-directed Translation schemes, Implementation of Syntax-directed Translators, Intermediate code, postfix notation, Parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser. More about translation: Array references in arithmetic expressions, procedures call, declarations and case statements.	08
IV	Symbol Tables: Data structure for symbols tables, representing scope information. Run-Time Administration: Implementation of simple stack allocation scheme, storage allocation in block structured language. Error Detection & Recovery: Lexical Phase errors, syntactic phase errors semantic errors.	08
V	Code Generation: Design Issues, the Target Language. Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, Code Generator. Code optimization: Machine-Independent Optimizations, Loop optimization, DAG representation of basic blocks, value numbers and algebraic laws, Global Data-Flow analysis.	08
Suggested Readings:

CO5	2	1		1		1						

MASTER OF COMPUTER APPLICATION (MCA)

MCA 55: Deep Learning

Course Outcome (CO)

At the end of course, the student will be able to understand

CO 1	Understand the concept of machine learning and artificial neural networks.	
CO 2	Understand the basic concepts of deep learning to analyze and implement widely used deep networks.	
CO 3	Study and analyze various convolutional and recurrent neural networks.	
CO 4	Study the concept of optimization in deep learning.	
CO 5	Apply concept of deep learning in solving various real world problem domains.	

DETAILED SYLLABUS

Unit	Topic	Proposed Lecture
I	Machine Learning- Introduction, Types, Linear models, Introduction of Neural Network, Training a neural network, Activation functions, Loss functions, Hyper parameters, Neural networks as universal function approximates, Road to deep learning.	08
II	Deep Networks : Introduction and history of deep learning, probabilistic theory of Deep learning, Common architectural principles of deep networks, building blocks of deep networks, Comparison with shallow networks, Deep belief networks, Generative Adversarial Networks (GAN), Semi-supervised Learning.	08
III	Convolutional Neural Networks: From fully connected network to convolutions, Common convolutional architectural patterns, Configuring convolutional layers, Configuring pooling layers, Transfer learning, Convolutional neural network – LeNet, AlexNet, VGG, NiN, GoogLeNet, Batch normalization, ResNet, DenseNet.	08
IV	Recurrent Neural Networks: Sequence models, Language models, Implementation of recurrent neural networks, GRU, LSTM, Deep recurrent neural networks, Bidirectional recurrent neural networks, Machine translation, Encoder-decoder architecture, Sequence to sequence.	08
V	Optimization: Optimization in deep learning, Convexity, Gradient descent, Stochastic gradient descent. Applications: Speech and audio processing, Natural language processing, Information retrieval, Object recognition and computer vision.	08

Suggested Readings:

1. Goodfellow I., Bengio Y. and Courville A., “Deep Learning”, MIT Press.
2. Shalizi C. R., “Advanced Data Analysis from an Elementary Point of View”, Cambridge University Press.
3. Deng L. and Yu D., “Deep Learning- Methods and Applications”, Now Publishers.
4. Nielsen M., “Neural Networks and Deep Learning”, Determination Press.
5. Patterson J. and Gibson A., “Deep Learning – A Practitioner’s Approach”, O Reilly.
